

SMS Host Agent Service Error 1053

I started to get above error after Current Branch 1902 upgrade. Not sure what caused the issue. Now the SMS Host Agent service will not start and MP has error 500. For this, I tried the following fix from Google. Now the Host agent service starts without any error and MP is working fine as well.

1. Site Reset using cd.latest
2. Remove MP role – Restart Server – Install MP role

Microsoft System Center Configuration Manager

Version 1902

Install

 Restart may be required

System Center Configuration Manager Setup Wizard

Before You Begin

This wizard walks you through the steps necessary to install or upgrade Configuration Manager. Setup also provides you with options to recover a site, perform site maintenance, and uninstall the site.

Before you run this wizard:

1. Verify that you have a supported Microsoft SQL Server installation available for Configuration Manager.
2. Identify the FQDN of the computer that is running Microsoft SQL Server.
3. Confirm that the computers for Configuration Manager site systems meet the minimum system requirements.
4. Read the [release notes online](#) for important information and for links to supported versions and system requirements.

Getting Started

Available Setup Options

Setup has detected an existing primary site on this computer and has enabled the following options.

- Install a Configuration Manager primary site
 - Use typical installation options for a stand-alone primary site
 - Install a Configuration Manager primary site
 - Use default installation path
 - Configure local SQL Server with default settings
 - Enable a local management point for Configuration Manager
 - Enable a local distribution point for Configuration Manager
- Install a Configuration Manager central administration site
- Upgrade this Configuration Manager site
- Recover a site
- Perform site maintenance or reset this site
- Uninstall this Configuration Manager site

< Previous Next > Cancel

Site Maintenance

Site maintenance allows you to modify site configuration, and perform a site reset to reapply default file and registry permissions on this site server. Select the action that you want to perform.

- Reset site with no configuration changes
- Modify SQL Server configuration
- Modify SMS Provider configuration
- Modify language configuration

< Previous Next > Cancel

Your site will be reset with default file and registry permissions.

Are you sure you would like to perform site reset?

Yes No

System Center Configuration Manager Setup Wizard

Configuration

Core setup has completed

Elapsed time: 00:00:32:05

- ✓ Stopping Configuration Manager services
- ✓ Setting up server accounts
- ✓ Updating directory permission
- ✓ Upgrading site control information
- ✓ Updating registry
- ✓ Installing Site Component Manager
- ✓ Verifying directory permission
