

Importing custom reports in Current Branch 1906

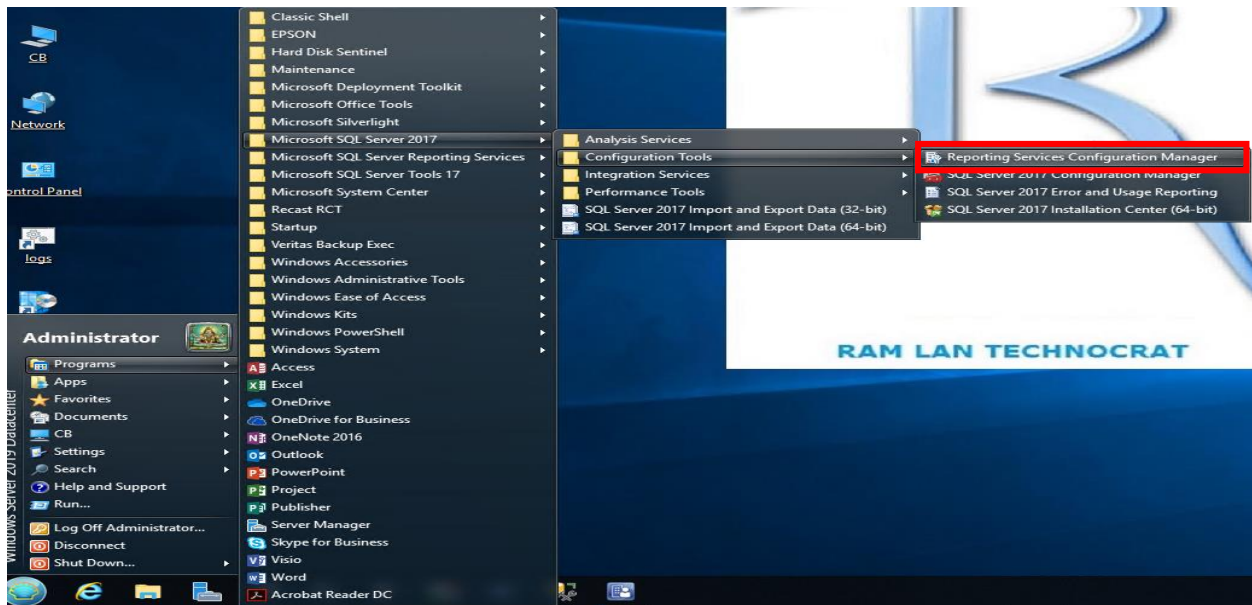

In this post, I will show you how to import custom reports (that are in RDL format) in Current Branch 1906.

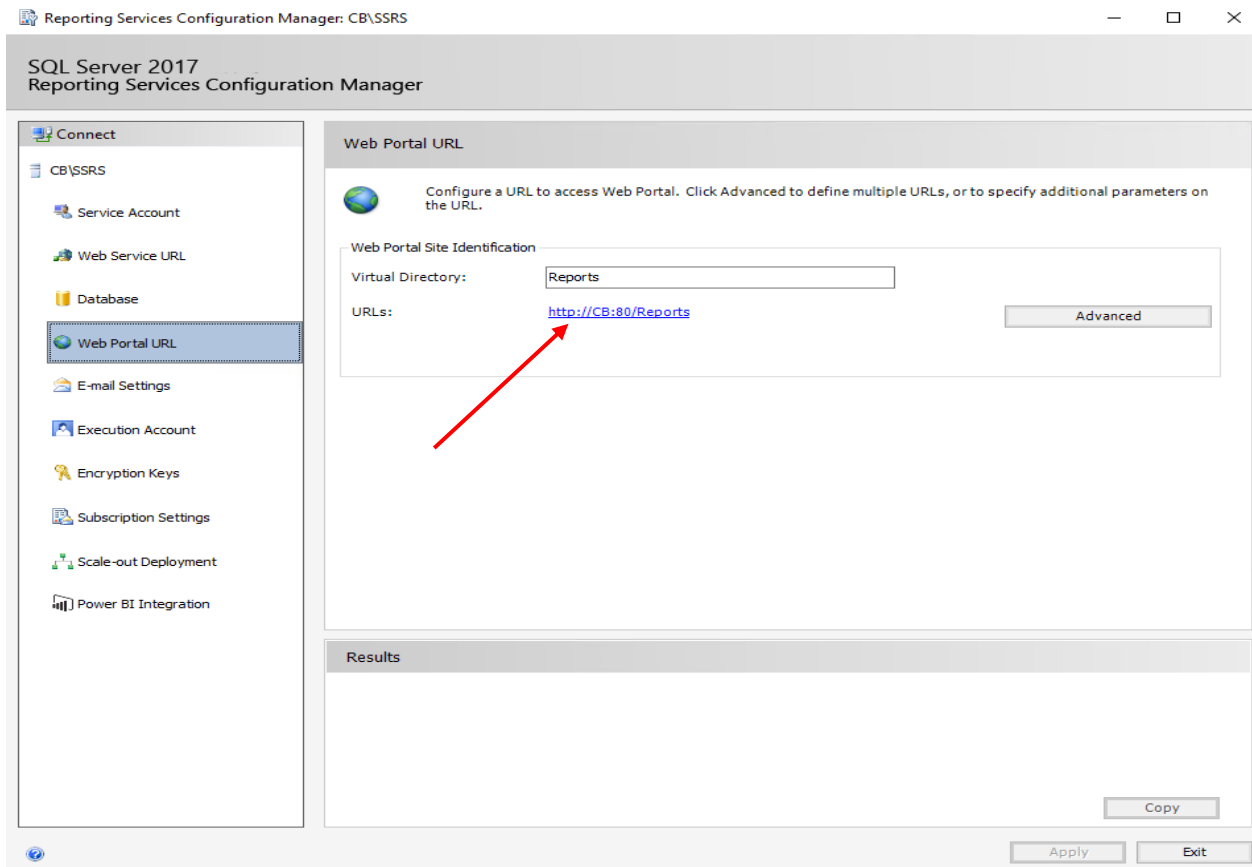

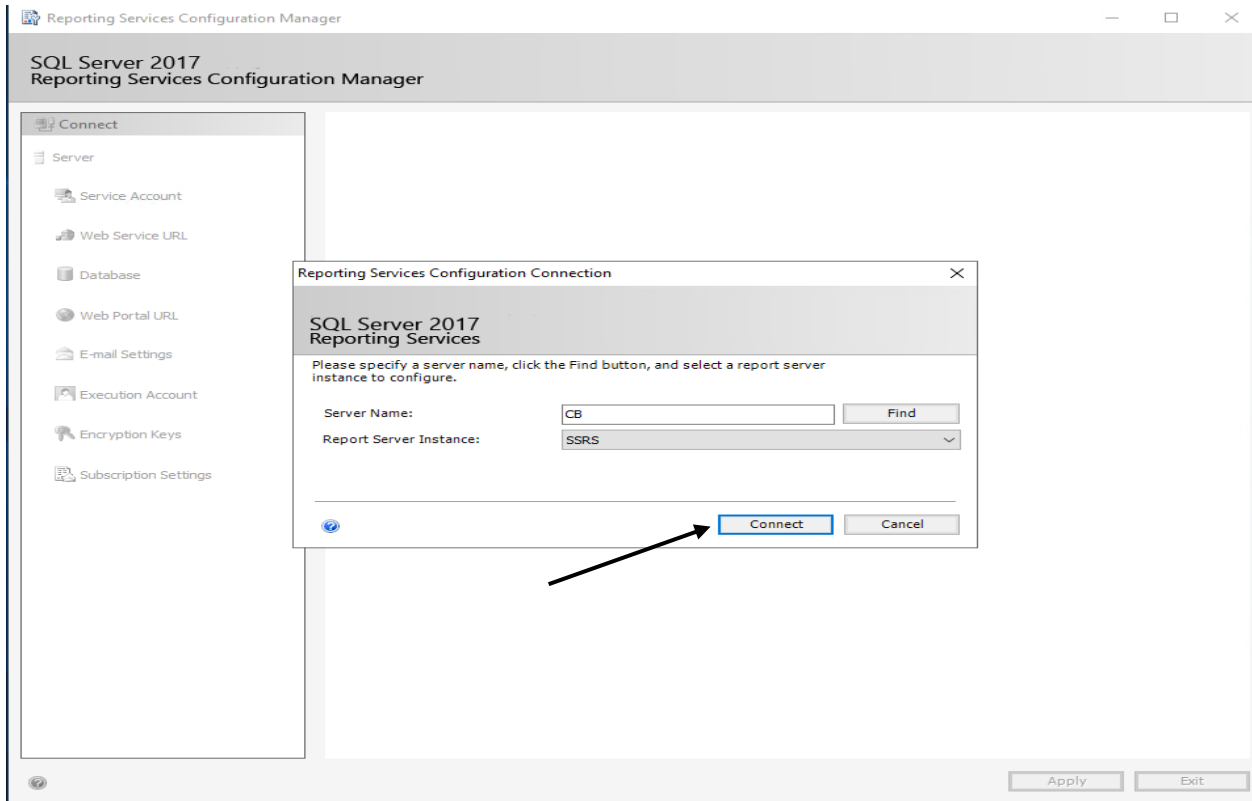

SCCM Community members constantly share free custom reports that are useful to many people. I have downloaded a number of such reports and started using it to show off the reports to Management and other colleagues at work. So, writing this post to help others do the same within their infra.

For this exercise, I am going to import Asset – Office Products reports as detailed below,

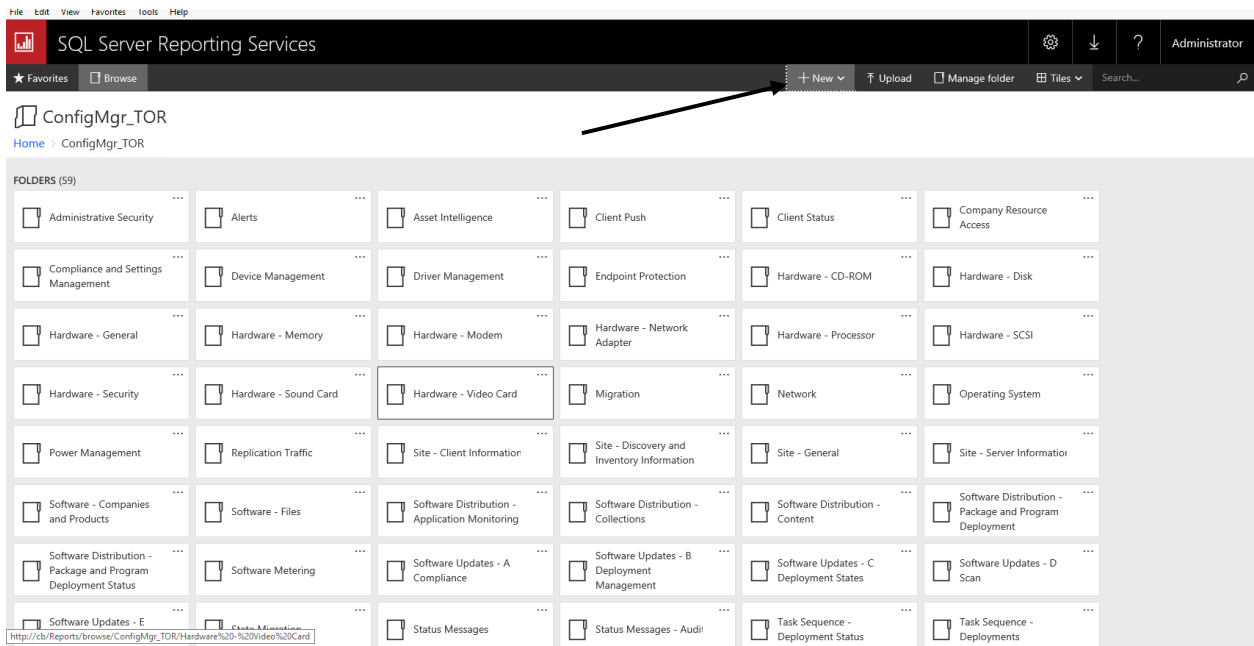

We need to login to SSRS report server. In my case it is on the same machine running CB1906.

Create a New folder

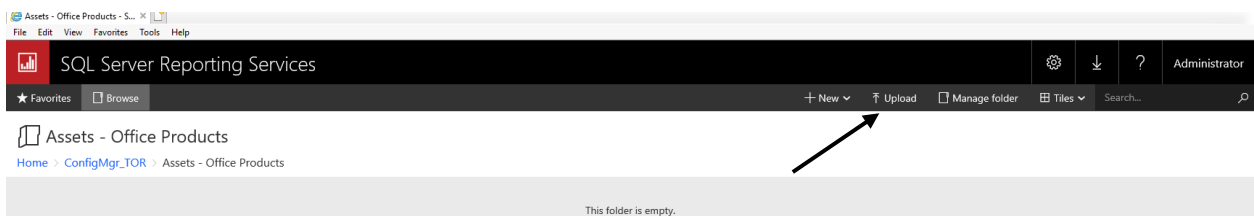

Create a new folder in ConfigMgr_TOR

Name

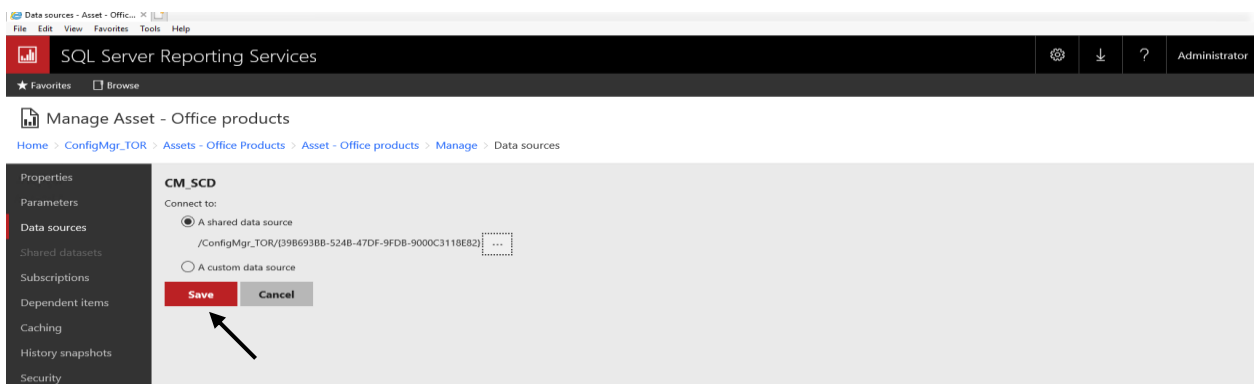

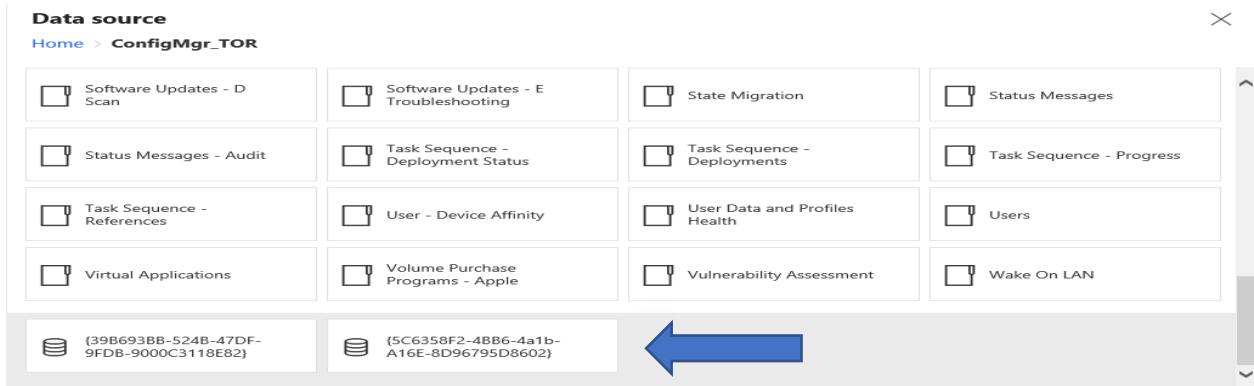

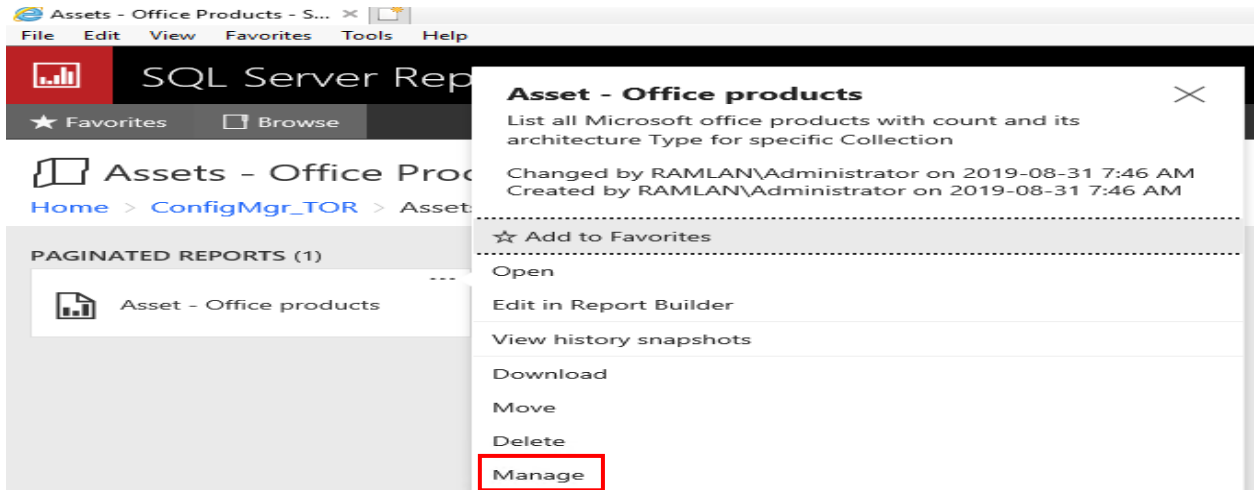

Go into Assets – Office Products and upload the custom report

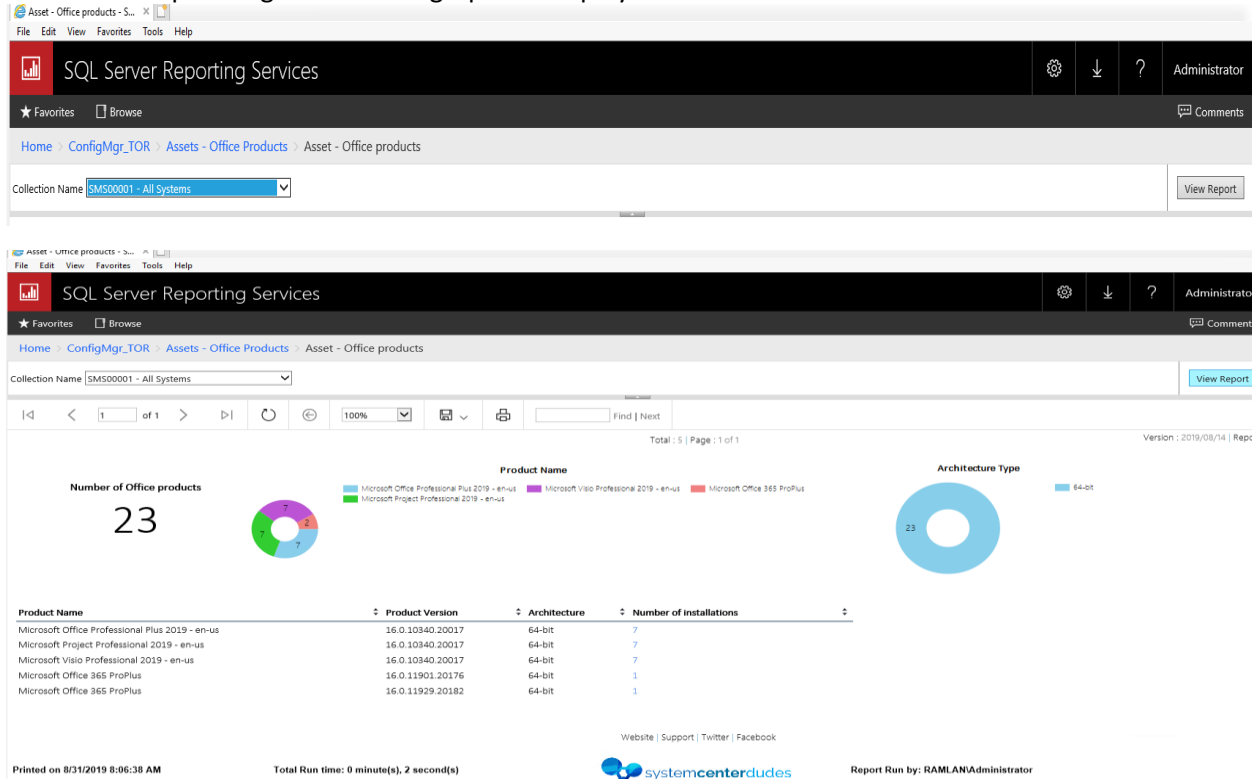

Now we have the custom report. Next we need to manage and assign a Data Source. I have 2 of them. Select the one you want to use and click Save.

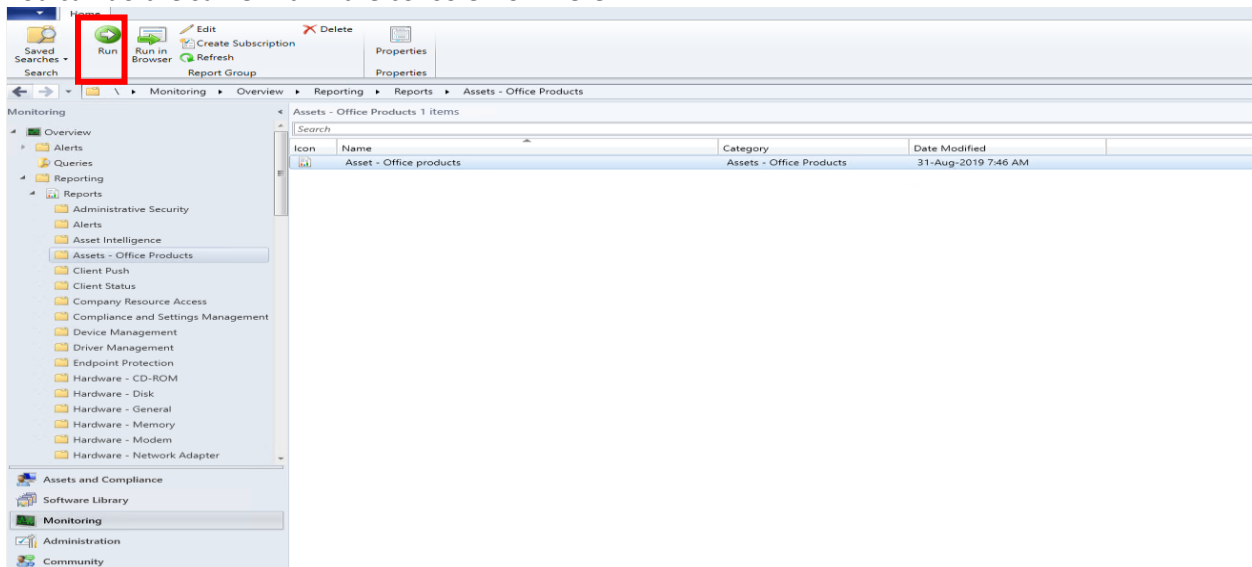

Now we have the report ready to use.

Click above report to get a detailed graphical display of the information.

You can do the same within the console from here..

Asset - Office products

To view the report, provide values for the parameters below, then click View Report.

Report Category
Assets - Office Products

Report Name
Asset - Office products

Report Description
List all Microsoft office products with count and its architecture Type for specific Collection

Collection Name: SMS00001 - All Systems [Values...](#)

< Back

of 100% Find | Next
