

Virtual Machine is attempting to monitor network traffic

I was getting above error when, I would start a virtual machine within VMWare fusion on Mac machine. I did not want to enter the password every time when, I start or restart the virtual machine because, I am running ESXi servers. Started looking for a fix and this is what would do the job.

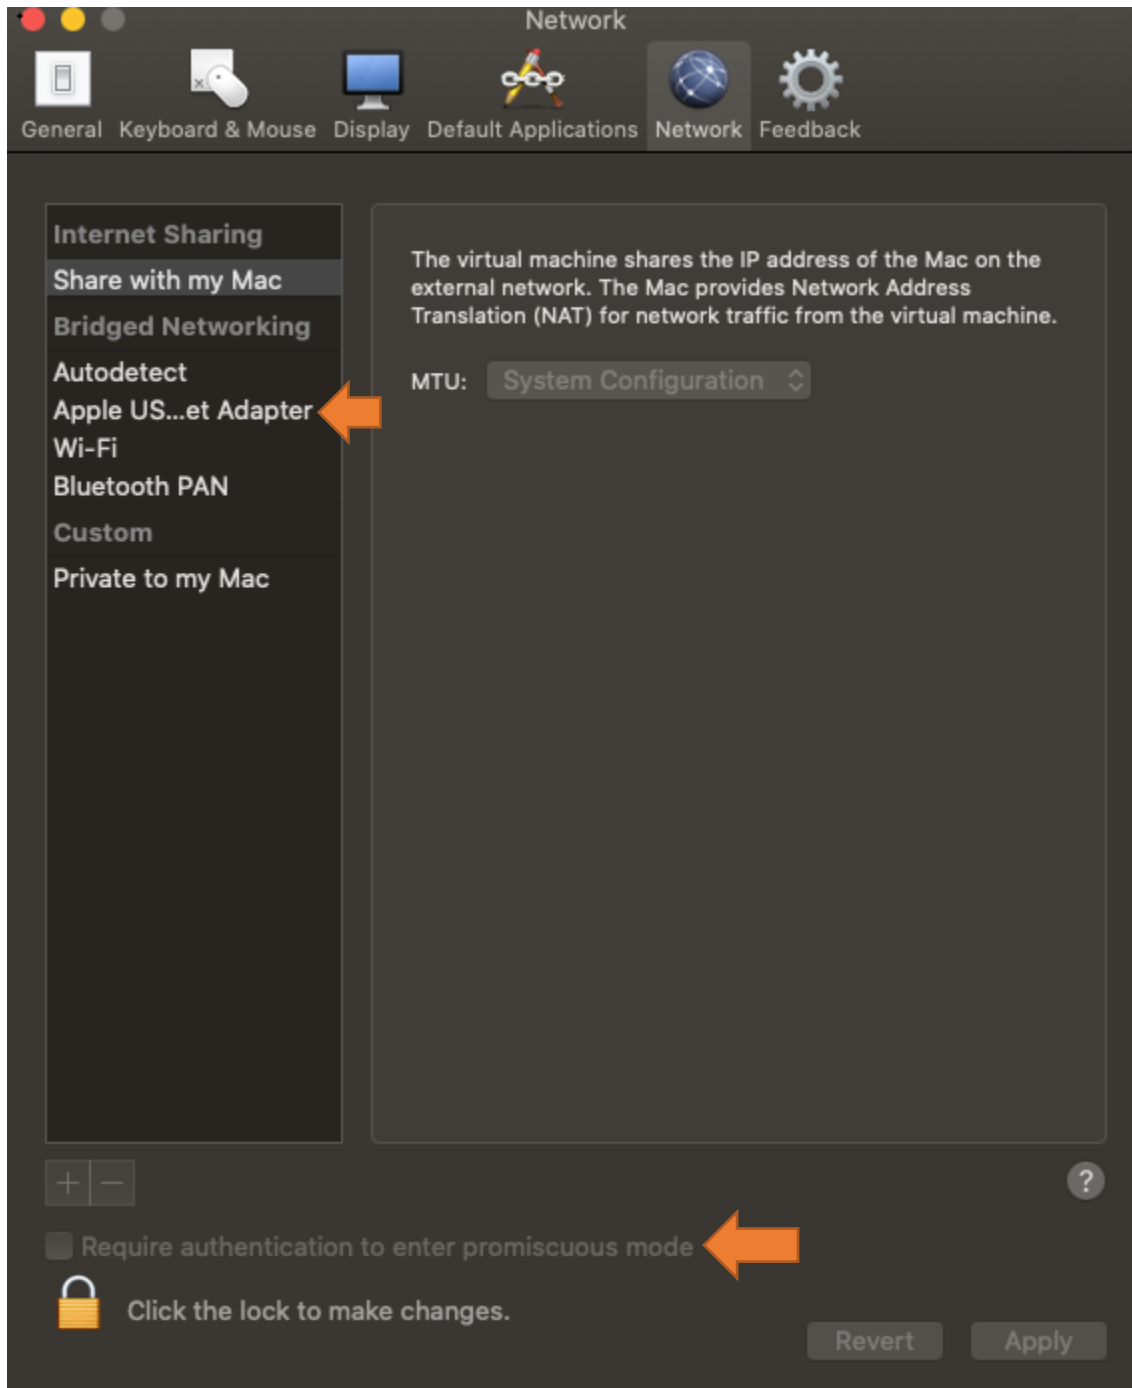

Open VMWare Fusion on the Virtual Machine you are running

Go to Preferences

Network

Uncheck this box. This will apply to all Virtual machine running within VMWare Fusion.

Thanks
