

## Console update for Microsoft Endpoint Configuration Manager version 2103

Microsoft released a new update for CB2013 on 11<sup>th</sup> May. I was able to download this update directly from here.

<https://docs.microsoft.com/en-us/mem/configmgr/hotfix/2103/9833643>

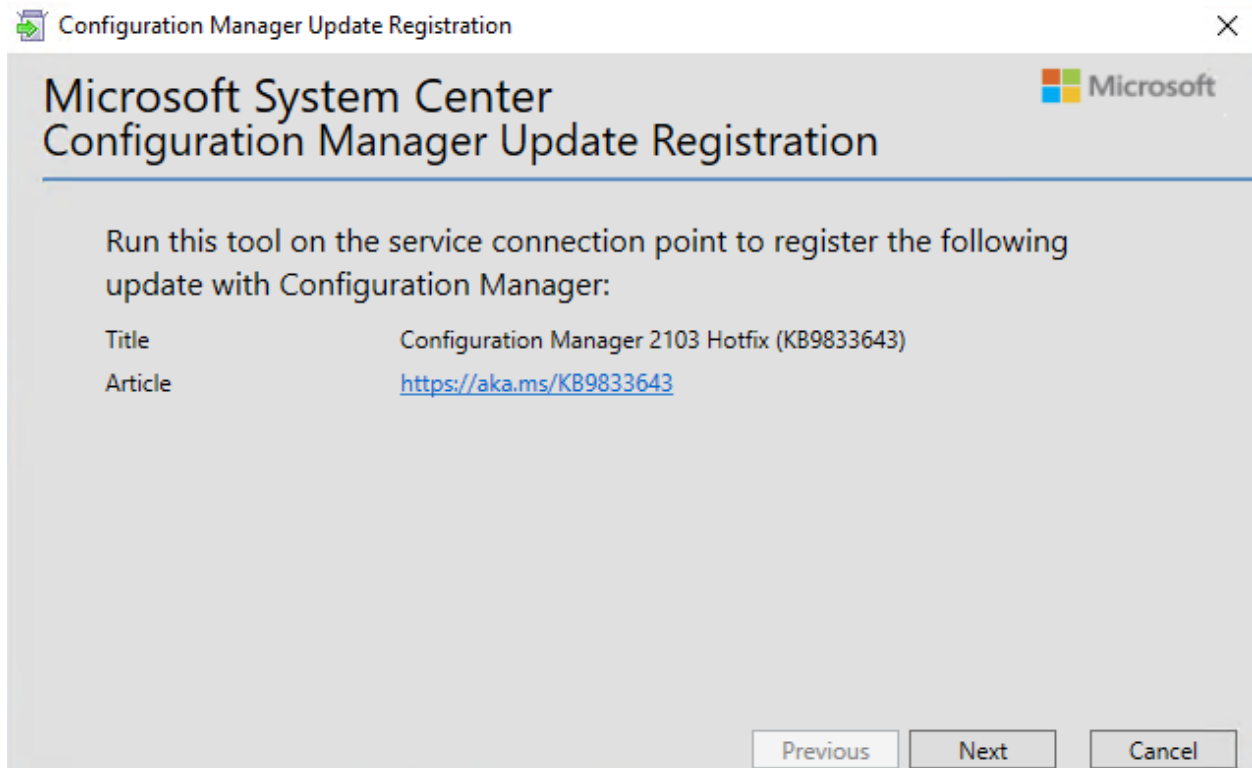

Please note this update will not show up in the console. We have download and run the update to show up in the console.

I have downloaded and copied the file to SCCM Server.

Open CMD as Admin on the SCCM Server and run this command

```
Administrator: Command Prompt

About Microsoft Endpoint Configuration Manager

# Microsoft Endpoint Configuration Manager

Microsoft Endpoint Configuration Manager

Version 2103

Console version: 5.2103.1059.2300

This update covers the following.

05/11/2021 • 2 minutes to read • 

Applies to: Configuration Manager (current branch, version 2103)

## Summary of KB9833643

An update is available to resolve the following issues with the Configuration Manager console after updating to version 2103.

- Task sequences, or task sequence steps, created before installation of version 2103 update fail to import. The Import Task Sequence Wizard displays the following error.

```
text Copy  
  
One or more errors occurred result may be incomplete  
System.NullReferenceException  
Object reference not set to an instance of an object.
```

- No data is shown in the Windows 10 servicing dashboard, even after completing the troubleshooting steps listed in the following support article. [The Windows 10 servicing dashboard shows no data](#)
- The `New-CMBootableMedia` PowerShell cmdlet returns the error `Could not find the ConfigMgr UI installation directory` after updating to version 2103.

## Update information for Microsoft Endpoint Configuration Manager, version 2103

The following hotfix to resolve this problem is available for download from the Microsoft Download Center:

[Download this hotfix now](#).

After you download the hotfix, see the following documentation for installation instructions:

[Use the Update Registration Tool to import hotfixes to Configuration Manager](#)

### Prerequisites

To apply this hotfix, you must have Microsoft Endpoint Configuration Manager, version 2103 installed in addition to the following update: [KB9603111](#) Update for Microsoft Endpoint Configuration Manager version 2103, early update ring

### Restart information

This update does not require a computer restart.

### Additional installation information

After you install this update on a primary site, pre-existing secondary sites must be manually updated. To update a secondary site in the Configuration Manager console, select **Administration > Site Configuration > Sites > Recover Secondary Site**, and then select the secondary site. The primary site then reinstalls that secondary site by using the updated files. Configurations and settings for the secondary site are not affected by this reinstallation. The new, upgraded, and reinstalled secondary sites under that primary site automatically receive this update.

Run the following SQL Server command on the site database to check whether the update version of a secondary site matches that of its parent primary site:

```
code Copy  
  
select dbo.fnGetSecondarySiteCMUpdateStatus ('SiteCode_of_secondary_site')
```

If the value 1 is returned, the site is up to date, with all the hotfixes applied on its parent primary site.

If the value 0 is returned, the site has not installed all the fixes that are applied to the primary site, and you should use the **Recover Secondary Site** option to update the secondary site.

## Version information

The following major components are updated to the versions specified:

Component	Version
Configuration Manager console	5.2103.1059.2300

## File information

File information is available in the downloadable [KB9833643\\_FileList.txt](#) text file.

## Release history

- May 11, 2021: Initial hotfix release

## References

[Updates and servicing for Configuration Manager](#)

This completes the update.

Thanks
