

TurboTax 2022 Update Error

I was getting this error when trying to update TT2202. Below is the fix

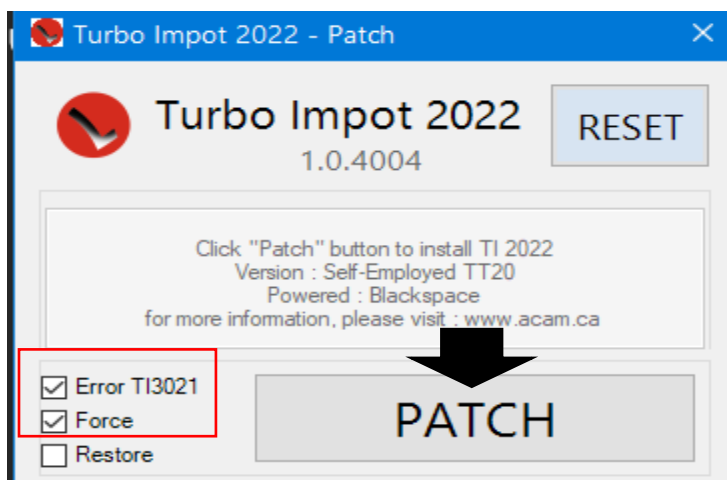

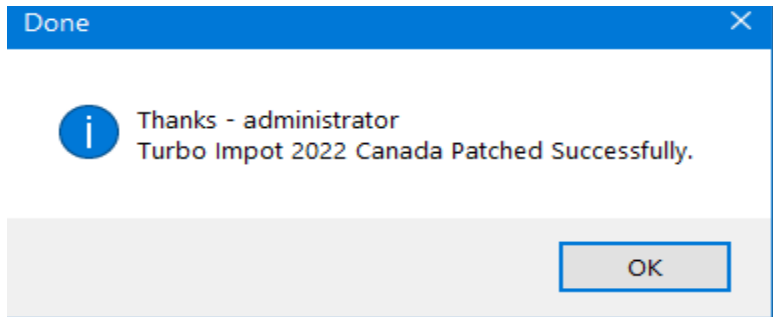

Try this by downloading the patch

<https://easyupload.io/neqsru>

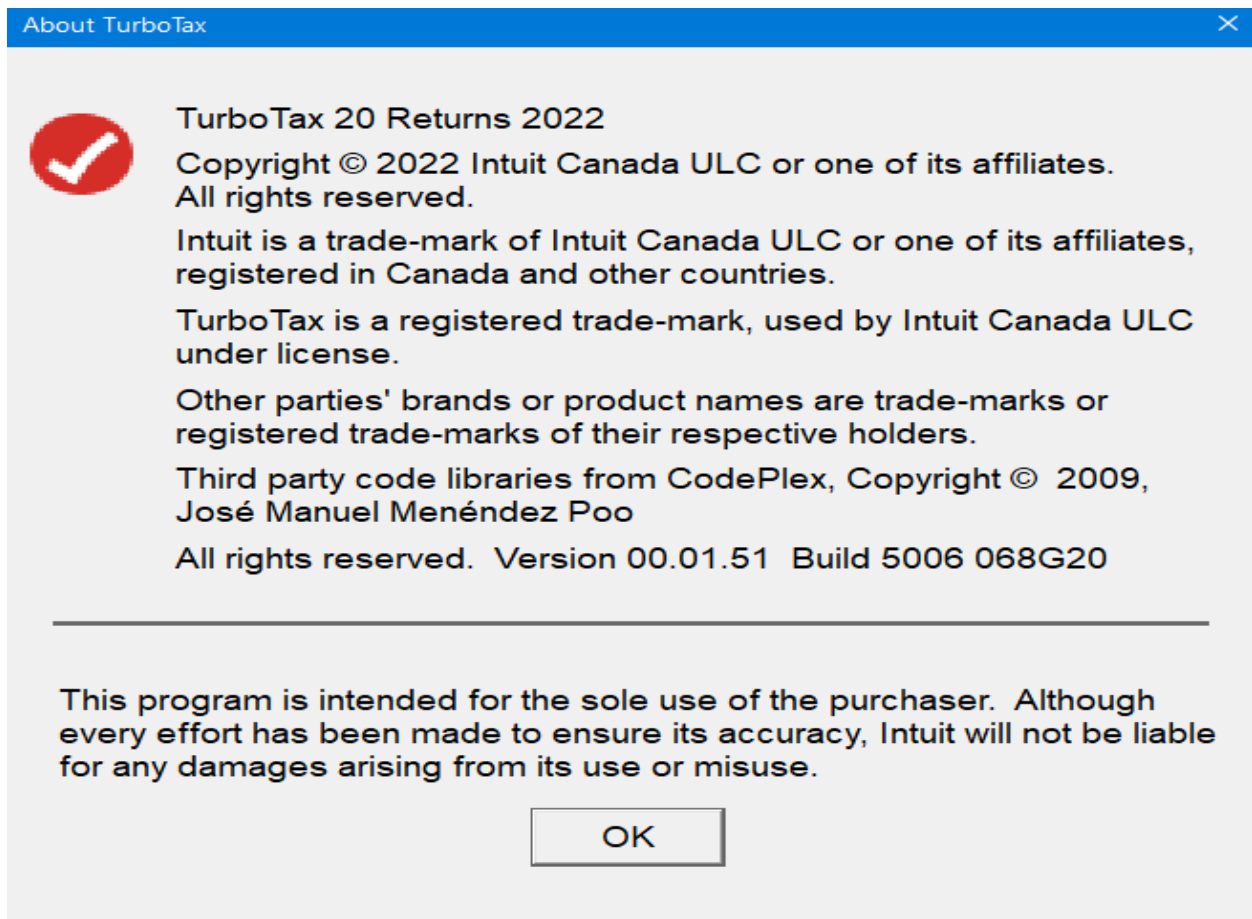

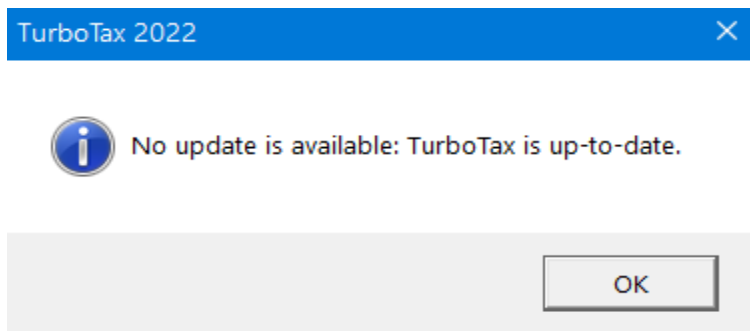

Close TT2022

Open the patch as Administrator

Open TT2202 and check for updates

The other option is this. Get the latest version of TT2202 from here - <https://turbotax.intuit.ca/tax/software/install> and then use the patch

To get the TT 2022 works with the Patch

1. uninstall the TT 2022
2. restart your pc and install the version 4004 TT 2022
3. close the activation screen if it shows up
4. run the patch
5. check the Error TT3021 and Force , then press Patch
6. relaunch the TT 2022

It should work, thank to blackspace. No need to disconnect the internet when run the TT 2022

Hello great people. Since the 5th of March 2023, there is an update to TurboTax 2022. Previously installed patch does not allow the update to be installed with the error TT3021. There are no problems here. Just install the update over the currently installed version and reuse the patch. Once running the patch in Admin mode, click TT3021 button. It will be patch and you will use the program updated to version 00.01.51. Build 5006 068G20.

Thanks

Ram
