# How to deploy Office 365 using Current Branch 1806

In this post, I will show you how to deploy O365 ProPlus through CB1806. Go to Software Library – Office 365 Client Management

When you click OCT – You will get below screen to configure various settings.

Deployment settings

Import   **Review**

At the network location is where the setup files are downloaded directly from Microsoft site.

Now we have Office 365 under Applications. Before we deploy to a collection, I had to create one for Office 365 and include Win 7 and Win 7 workstations for testing.

Date/Time: 08-Nov-2018 11:08:03 AM   Component: AppEnforce
Thread: 3724 (0xE8C)   Source: appexcnlib.cpp:585

Matched exit code 0 to a Success entry in exit codes table.

As you can see from above screen shot Office 365 is not activated because, I don't have a valid subscription with MS.

This concludes Office 365 deployment through CB1806.

Thanks

Ram Lan
