# How to find the hard drive is SSD / SATA / IDE

In this post, I will show you 2 ways to find out the type of hard drive installed on the system.

I am writing this article when one of my buyers asked me to prove the hard drive was SSD when, I was trying to sell the laptop. I had to Google and came up with these solutions. Hope it helps you as well.

First, I will use built-in tool provided by Microsoft with the Operating system. It is called Defragment and Optimize Drives

Second, will be using PowerShell command.

Thanks
