# OFFICE 2019 PROFESSIONAL PACKAGE

In this post, I will show you how to create and deploy Office 2019 Professional to workstations from CB1810. For this exercise, I created a device collection called Office 2019 and includes Win 10 workstation and other Windows 2019 servers as well.

Download Office Deployment Toolkit from here - https://www.microsoft.com/en-us/download/details.aspx?id=49117

If you're' still confused about the differences about Office 2019 vs Office 365:

Office 365 is a subscription that comes with premium apps like Word, Excel, PowerPoint, OneNote, Outlook, Publisher, and Access (Publisher and Access available on PC only). The apps can be installed on multiple devices, including PCs, Macs, iPads, iPhones, Android tablets, and Android phones. With a subscription, you get the latest versions of the apps and automatically receive updates when they happen.
Office 2019 is a one-time purchase that comes with classic apps like Word, Excel, and PowerPoint for PC or Mac, and does not include any of the services that come with an Office 365 subscription. One-time purchases don't have an upgrade option, which means if you plan to upgrade to the next major release, you'll have to buy it at full price.

So, if your organization has chosen to deploy Office 2019, you can deploy it using SCCM. The mains steps are:

- Preparing the installation
- Create the SCCM application
- Create the deployment type
- Deploy the application

Now, I will run ODT.
