Client Update Settings

This update includes an update for the Configuration Manager client. You can upgrade your clients immediately, or validate this client in a pre-production collection before you upgrade all your Configuration Manager clients.

☒ Upgrade without validating

Overwrites your current Configuration Manager client package with the new client update. All new client installations and client upgrades use this new client update.

☐ Validate in pre-production collection

Validate the client update on members of the pre-production collection while you keep your production client package intact. Later, you can overwrite the production package using Client Update Options in the Updates and Servicing node of the Configuration Manager console.

Pre-production collection:

NEW FEATURES:

There are only a few in this release detailed below.

Delivery Optimization in Network Cache – Renamed:

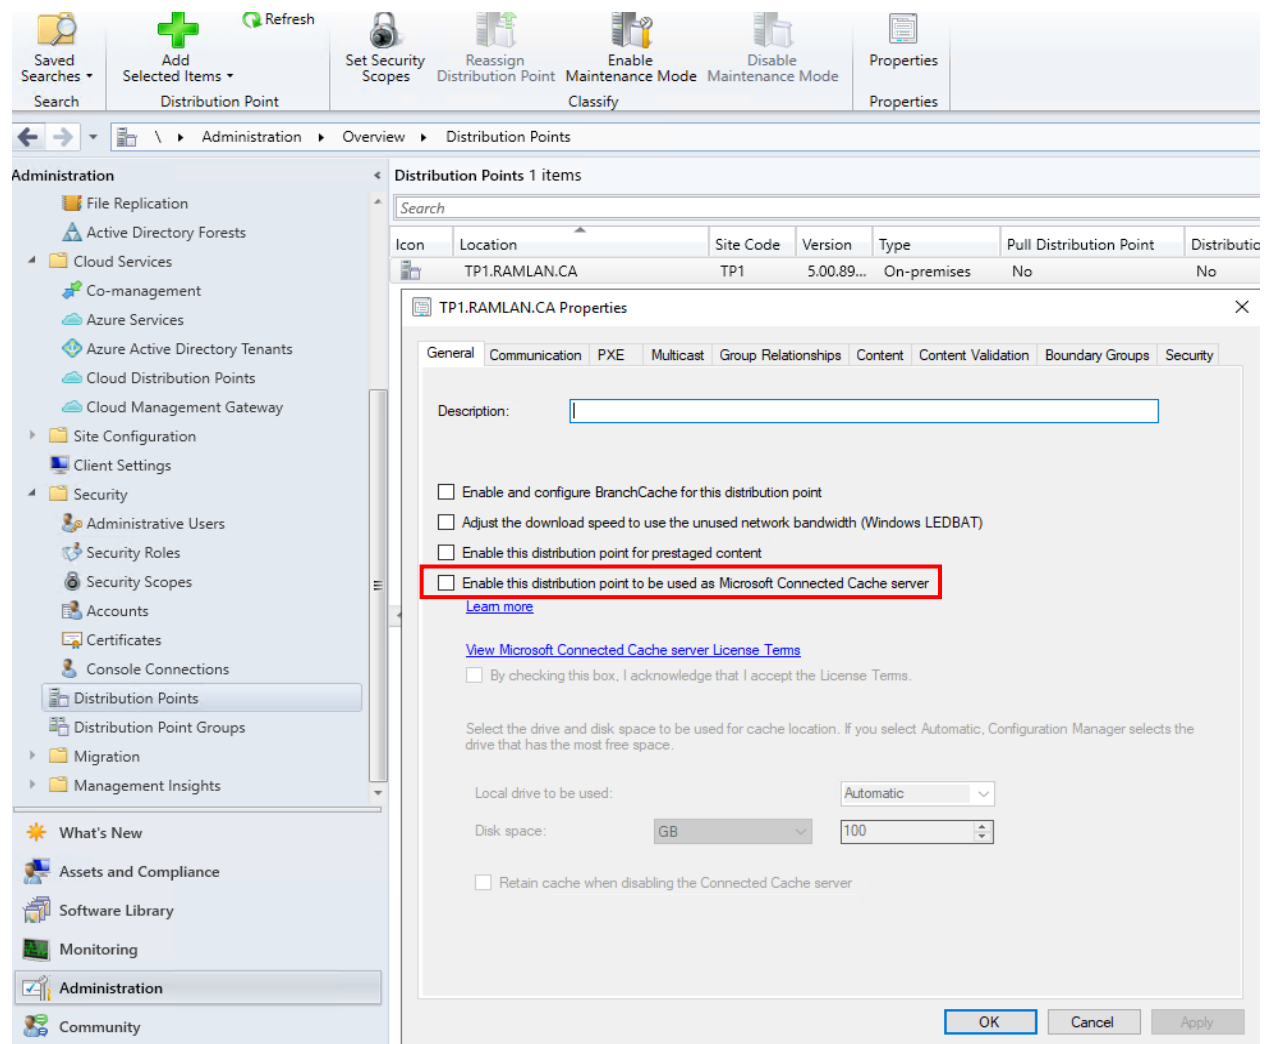

Microsoft Connected Cache support for Intune Win32 apps

When you enable Microsoft Connected Cache on your Configuration Manager distribution points, they can now serve Microsoft Intune Win32 apps to co-managed clients.

Note

Configuration Manager current branch version 1906 included [Delivery Optimization In-Network Cache](#), an application installed on Windows Server that's still in development. Starting in technical preview branch version 1911 this feature is now called **Microsoft Connected Cache**.

When you install Connected Cache on a Configuration Manager distribution point, it offloads Delivery Optimization service traffic to local sources. Connected Cache does this behavior by efficiently caching content at the byte range level.

The screenshot shows the Configuration Manager console with the 'Administration' pane on the left. The 'Distribution Points' folder is expanded, and the 'TP1.RAMLAN.CA Properties' dialog box is open. The 'General' tab is selected, and the checkbox 'Enable this distribution point to be used as Microsoft Connected Cache server' is highlighted with a red box. Other options include 'Enable and configure BranchCache for this distribution point', 'Adjust the download speed to use the unused network bandwidth (Windows LEDBAT)', and 'Enable this distribution point for prestaged content'. The 'Local drive to be used' is set to 'Automatic' and 'Disk space' is set to '100 GB'.

Icon	Location	Site Code	Version	Type	Pull Distribution Point	Distribution Point
	TP1.RAMLAN.CA	TP1	5.00.89...	On-premises	No	No

TP1.RAMLAN.CA Properties

General | Communication | PXE | Multicast | Group Relationships | Content | Content Validation | Boundary Groups | Security

Description:

☐ Enable and configure BranchCache for this distribution point

☐ Adjust the download speed to use the unused network bandwidth (Windows LEDBAT)

☐ Enable this distribution point for prestaged content

☐ **Enable this distribution point to be used as Microsoft Connected Cache server**

[Learn more](#)

[View Microsoft Connected Cache server License Terms](#)

☐ By checking this box, I acknowledge that I accept the License Terms.

Select the drive and disk space to be used for cache location. If you select Automatic, Configuration Manager selects the drive that has the most free space.

Local drive to be used:

Disk space:

☐ Retain cache when disabling the Connected Cache server

OK Cancel Apply

Control Panel – Program Name: No longer Current Branch or System Center Configuration Manager

Configuration Manager

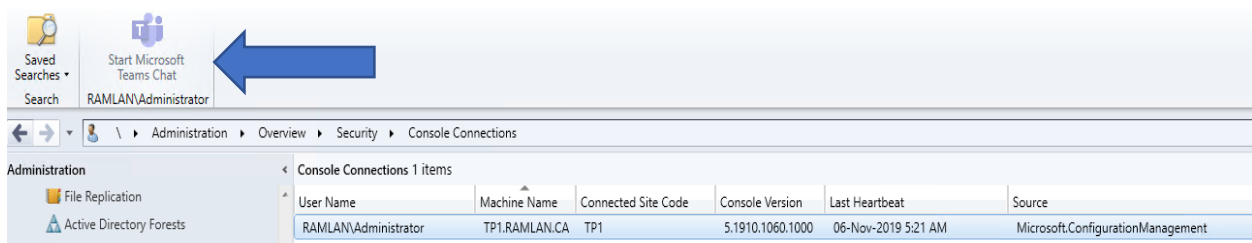

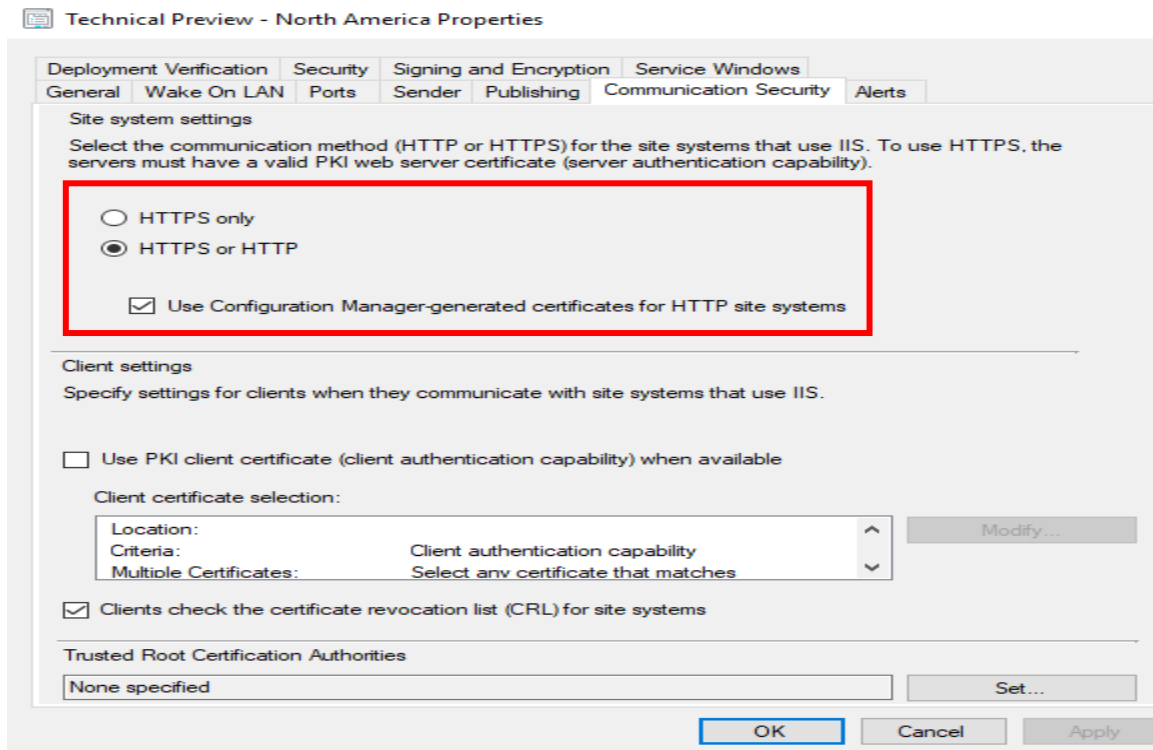

New Components – Microsoft Endpoint Manager:

The following Microsoft management solutions are all now part of the **Microsoft Endpoint Manager** brand:

- [Configuration Manager](#)
- [Intune](#)
- [Desktop Analytics](#)
- [Autopilot](#)
- Other features in the [Device Management Admin Console](#)

Microsoft Team Chat:

In order to see Team Chat within the console, you have to enable this at the site properties

So that is all about TP1911 and the new branding name for System Center Configuration Manager aka Current Branch will be called **as Microsoft Endpoint Manager (MEM).**

Thanks

Ram Lan
