

Microsoft Edge Application Deployment

I will walk you through the process of creating Edge application and deploying to All Systems within the network. Microsoft has been working hard to replace Chrome at the enterprise level. This is a step up with this browser. I want to test and compare the performance between the both. So, enjoy the read..

Specify the user experience for the installation of this software on the selected devices

Specify user experience setting for this deployment

User notifications: Display in Software Center, and only show notifications for computer restarts

When software changes are required, show a dialog window to the user instead of a toast notification

When the installation deadline is reached, allow the following activities to be performed outside the maintenance window:

- Software Installation
- System restart (if required to complete the installation)

Write filter handling for Windows Embedded devices

Commit changes at deadline or during a maintenance window (requires restarts)

If this option is not selected, content will be applied on the overlay and committed later.

Tracking prevention

Websites use trackers to collect info about your browsing. Websites may use this info to improve sites and show you content like personalized ads. Some trackers collect and send your info to sites you haven't visited. [Learn more](#)

Tracking prevention

Basic

- Allows most trackers across all sites
- Content and ads will likely be personalized
- Sites will work as expected
- Blocks known harmful trackers

Balanced

(Recommended)

- Blocks trackers from sites you haven't visited
- Content and ads will likely be less personalized
- Sites will work as expected
- Blocks known harmful trackers

Strict

- Blocks a majority of trackers from all sites
- Content and ads will likely have minimal personalization
- Parts of sites might not work
- Blocks known harmful trackers
