

USB Device Inventory

In this post, I will show you how to create a query for USB devices and get a report of computers that have USB attached to their system. This will be useful, if the company has implemented a policy where USB device are forbidden.

The screenshot shows the SCCM console interface. At the top, there are navigation buttons: 'Create Custom Client Device Settings', 'Create Custom Client User Settings', 'Saved Searches', and 'Properties'. A black arrow points to the 'Properties' button. Below this is a breadcrumb trail: 'Administration > Overview > Client Settings'. The main area shows 'Client Settings 3 items' with a search bar and a table:

Icon	Name	Type	Priority	Deployments
	Default Client Settings	Default	10000	0

Below the table, the 'Default Settings' window is open. The left sidebar lists various settings, with 'Hardware Inventory' and 'Software Inventory' highlighted. The main pane is titled 'Default Settings' and contains the following configuration options:

- Specify settings that apply to all clients in the hierarchy, and can be modified by custom settings.
- Specify hardware inventory settings for client computers.
- Device Settings**
 - Enable hardware inventory on clients: Yes
 - Hardware inventory schedule: Occurs every 7 days effective 01-Feb-1970 12:00 AM. Button: Schedule ...
 - Maximum random delay (minutes): 240
 - Maximum custom MIF file size (KB): 250
 - Hardware inventory classes: (empty)
 - Collect MIF files: None

A black arrow points to the 'Set Classes ...' button.

Hardware Inventory Classes

Select the classes that will be collected by hardware inventory
