

# Free Busy Client Experience after Exchange Server 2019 Hybrid Configuration

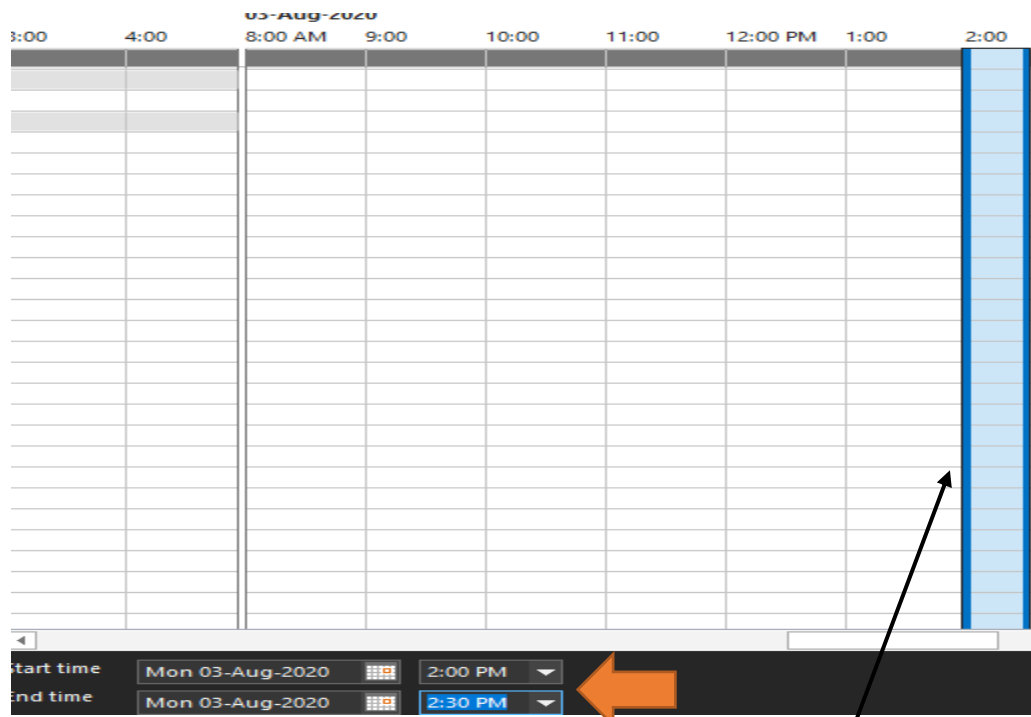

In this post, I will compare client experience with Free/Busy after, we completed Exchange Server 2019 HCW and migrated few mailboxes to Office 365

I will create couple of meeting request.

Add Attendees – Pick a time – Click Send

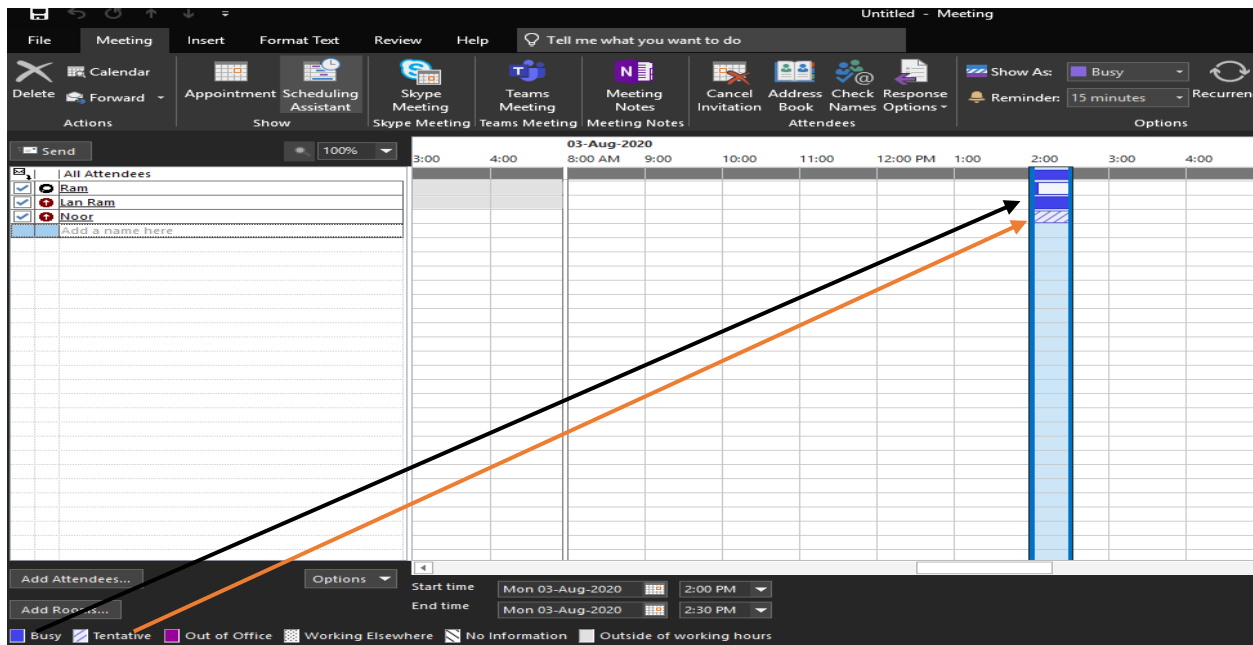

If free/busy lookups are working then you shouldn't see any of the "No Information" indications for any of the recipients.

To take it a step further, book one meeting between the two recipients and then create another meeting request, and you should see the existing meeting in their free/busy info

Note, free/busy lookups need to be working in both directions, so make sure you test this from both sides of the Hybrid environment.

With this test we know Free/Busy is working after hybrid configuration and mailbox migration.

Thanks
