

Installing ESXi 6.0 in a Hyper-V Virtual Machine

In this post, we will install ESXi 6.0 as a nested virtual machine on Hyper-V Windows Server 2019. This is for testing only not recommended for Production. **Please note ESXi6.5 or ESXi7.0 will not work for nested virtual machine.**

One of the new features with Windows Server 2019 is the Nested Virtualization. It means that you can run a VM inside a Virtual Machine. So, you also can run an ESXi inside a Hyper-V Virtual Machine.

Basically, to install ESXi in a Hyper-V Virtual Machine, below are the steps:

1. Make sure your processor support virtualization – Intel VT-x
2. Make sure physical network card is Intel. If it is Realtek you might have connectivity issue with nested ESXi host later
3. Create a folder structure C:\Virtual\ESXi-Images
4. Install PowerCLI
5. Download ESXi600-201706001.zip from VMWare site
6. Download net-tulip from here http://vibsdepot.v-front.de/depot/bundles/net-tulip-1.1.15-1-offline_bundle.zip
7. Copy 5 and 6 to C:\Virtual\ESXi-Images folder
8. Rest follow the document

ESXi600-201706001.zip	10-Aug-2020 11:2...	WinRAR ZIP archive	514,876 KB
net-tulip-1.1.15-1-offline_bundle.zip	10-Aug-2020 11:0...	WinRAR ZIP archive	37 KB

An orange arrow points to the 'net-tulip-1.1.15-1-offline_bundle.zip' file.

Open PowerCLI and run these commands. When done you folder structure should look as below. 

1. Add-EsxSoftwareDepot .\ESXi600-201706001.zip
2. Add-EsxSoftwareDepot .\net-tulip-1.1.15-1-offline_bundle.zip
3. Get-EsxImageProfile|ft Name
4. New-EsxImageProfile -CloneProfile ESXi-6.0.0-20170604001-standard -Name ESXi-NAKIVO -Vendor custom
5. Add-EsxSoftwarePackage -ImageProfile ESXi-NAKIVO -SoftwarePackage net-tulip -Force
6. Set-EsxImageProfile -AcceptanceLevel CommunitySupported -ImageProfile ESXi-NAKIVO
7. Export-EsxImageProfile -ImageProfile ESXi-NAKIVO -FilePath C:\Virtual\ESXi-images\esxi60_custom.iso -ExportToIso -Force

Open PowerShell as Administrator and run below command. Change **VMName** accordingly.

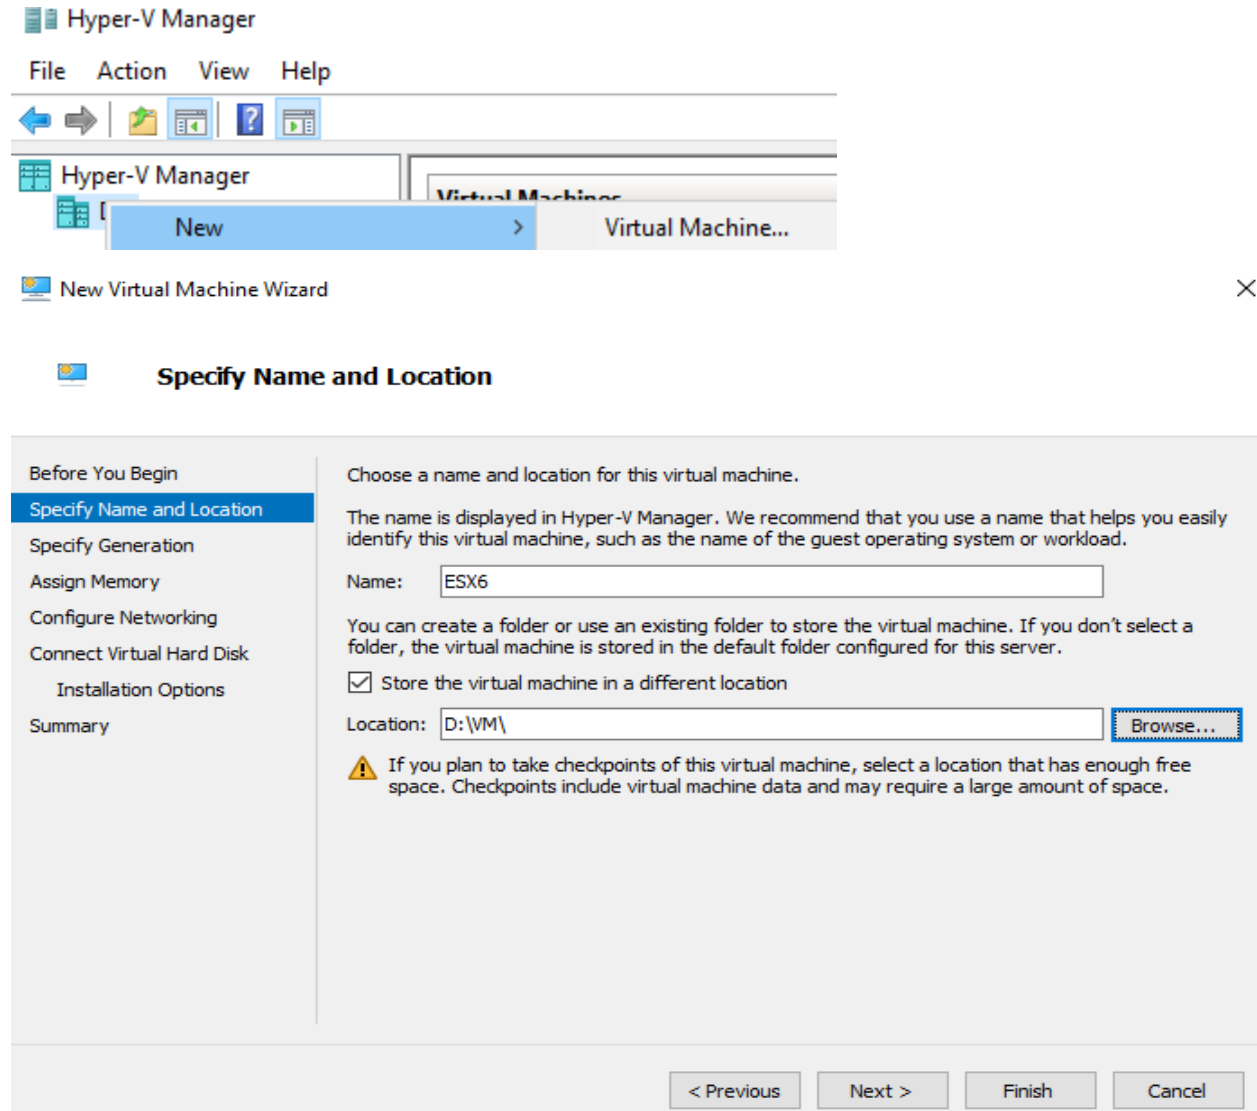

Set-VMProcessor -VMName **ESX6** -ExposeVirtualizationExtensions \$true

```
Administrator: Windows PowerShell
Windows PowerShell
Copyright (C) Microsoft Corporation. All rights reserved.

PS C:\Users\Administrator> Set-VMProcessor -VMName ESX6 -ExposeVirtualizationExtensions $true
PS C:\Users\Administrator>
```

Now create virtual machine using Hyper-V Manager as detailed below

Specify Generation

- Before You Begin
- Specify Name and Location
- Specify Generation**
- Assign Memory
- Configure Networking
- Connect Virtual Hard Disk
- Installation Options
- Summary

Choose the generation of this virtual machine.

Generation 1

This virtual machine generation supports 32-bit and 64-bit guest operating systems and provides virtual hardware which has been available in all previous versions of Hyper-V.

Generation 2

This virtual machine generation provides support for newer virtualization features, has UEFI-based firmware, and requires a supported 64-bit guest operating system.

 Once a virtual machine has been created, you cannot change its generation.

Assign Memory

- Before You Begin
- Specify Name and Location
- Specify Generation
- Assign Memory**
- Configure Networking
- Connect Virtual Hard Disk
- Installation Options
- Summary

Specify the amount of memory to allocate to this virtual machine. You can specify an amount from 32 MB through 12582912 MB. To improve performance, specify more than the minimum amount recommended for the operating system.

Startup memory: MB

Use Dynamic Memory for this virtual machine.

 When you decide how much memory to assign to a virtual machine, consider how you intend to use the virtual machine and the operating system that it will run.

Finish

Cancel

 **Configure Networking**

- Before You Begin
- Specify Name and Location
- Specify Generation
- Assign Memory
- Configure Networking**
- Connect Virtual Hard Disk
- Installation Options
- Summary

Each new virtual machine includes a network adapter. You can configure the network adapter to use a virtual switch, or it can remain disconnected.

Connection:

Finish

Cancel

 **Connect Virtual Hard Disk**

- Before You Begin
- Specify Name and Location
- Specify Generation
- Assign Memory
- Configure Networking
- Connect Virtual Hard Disk**
- Installation Options
- Summary

A virtual machine requires storage so that you can install an operating system. You can specify the storage now or configure it later by modifying the virtual machine's properties.

 Create a virtual hard disk

Use this option to create a VHDX dynamically expanding virtual hard disk.

Name:

Location:

Size: GB (Maximum: 64 TB)

 Use an existing virtual hard disk

Use this option to attach an existing virtual hard disk, either VHD or VHDX format.

Location:

 Attach a virtual hard disk later

Use this option to skip this step now and attach an existing virtual hard disk later.

< Previous

Next >

Finish

Cancel

Installation Options

- Before You Begin
- Specify Name and Location
- Specify Generation
- Assign Memory
- Configure Networking
- Connect Virtual Hard Disk
- Installation Options**
- Summary

You can install an operating system now if you have access to the setup media, or you can install it later.

- Install an operating system later
- Install an operating system from a bootable CD/DVD-ROM

Media

Physical CD/DVD drive: E: Browse...

Image file (.iso): Select the ISO we created – Step 7 Browse...

- Install an operating system from a bootable floppy disk

Media

Virtual floppy disk (.vfd): Browse...

- Install an operating system from a network-based installation server

Your network adapter is disconnected. To perform a network-based installation, return to the Configure Networking page and connect the network adapter.

Completing the New Virtual Machine Wizard

- Before You Begin
- Specify Name and Location
- Specify Generation
- Assign Memory
- Configure Networking
- Connect Virtual Hard Disk
- Installation Options
- Summary**

You have successfully completed the New Virtual Machine Wizard. You are about to create the following virtual machine.

Description:

```

Name:          ESX6
Generation:    Generation 1
Memory:       4048 MB
Network:      Not Connected
Hard Disk:    D:\VM\ESX6\Virtual Hard Disks\ESX6.vhdx (VHDX, dynamically expanding)
Operating System: Will be installed from C:\Users\Administrator\Downloads\ESXi-Customizer-PS-mas
    
```

To create the virtual machine and close the wizard, click Finish.

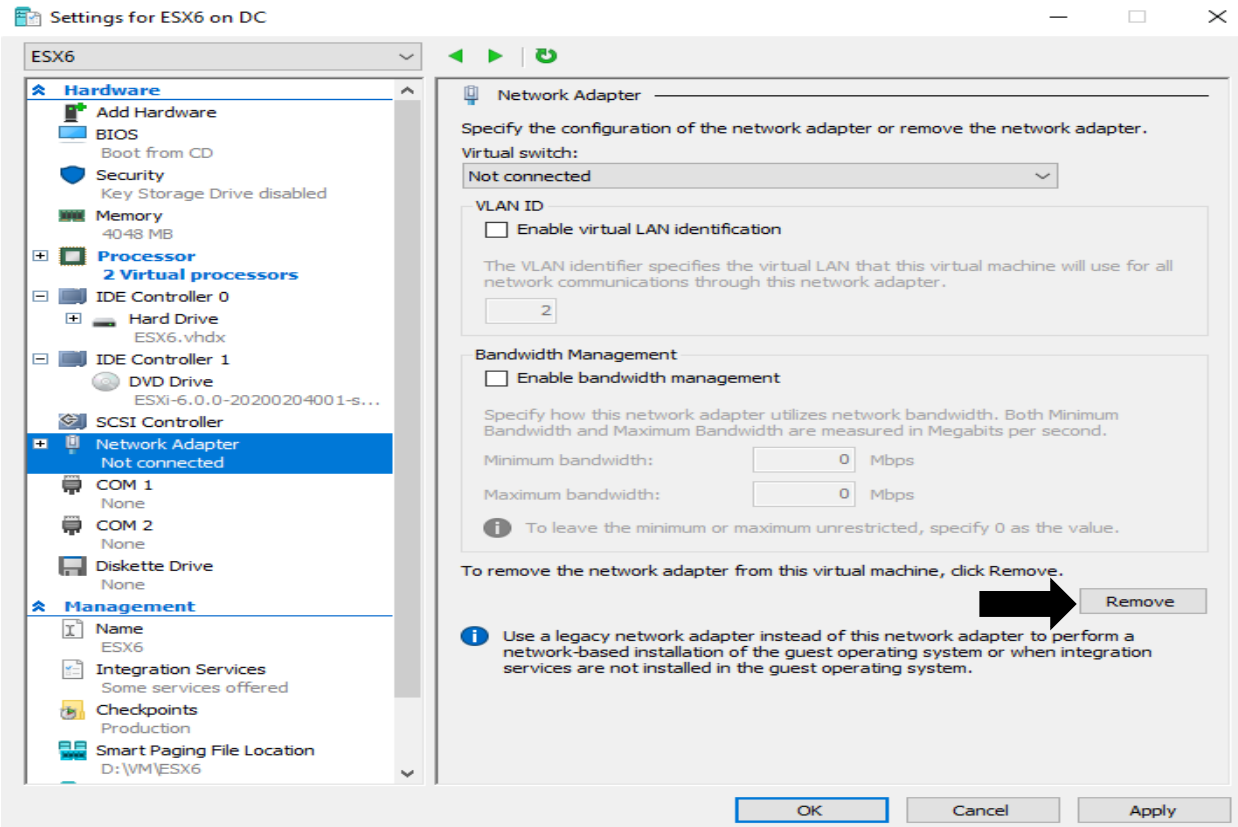

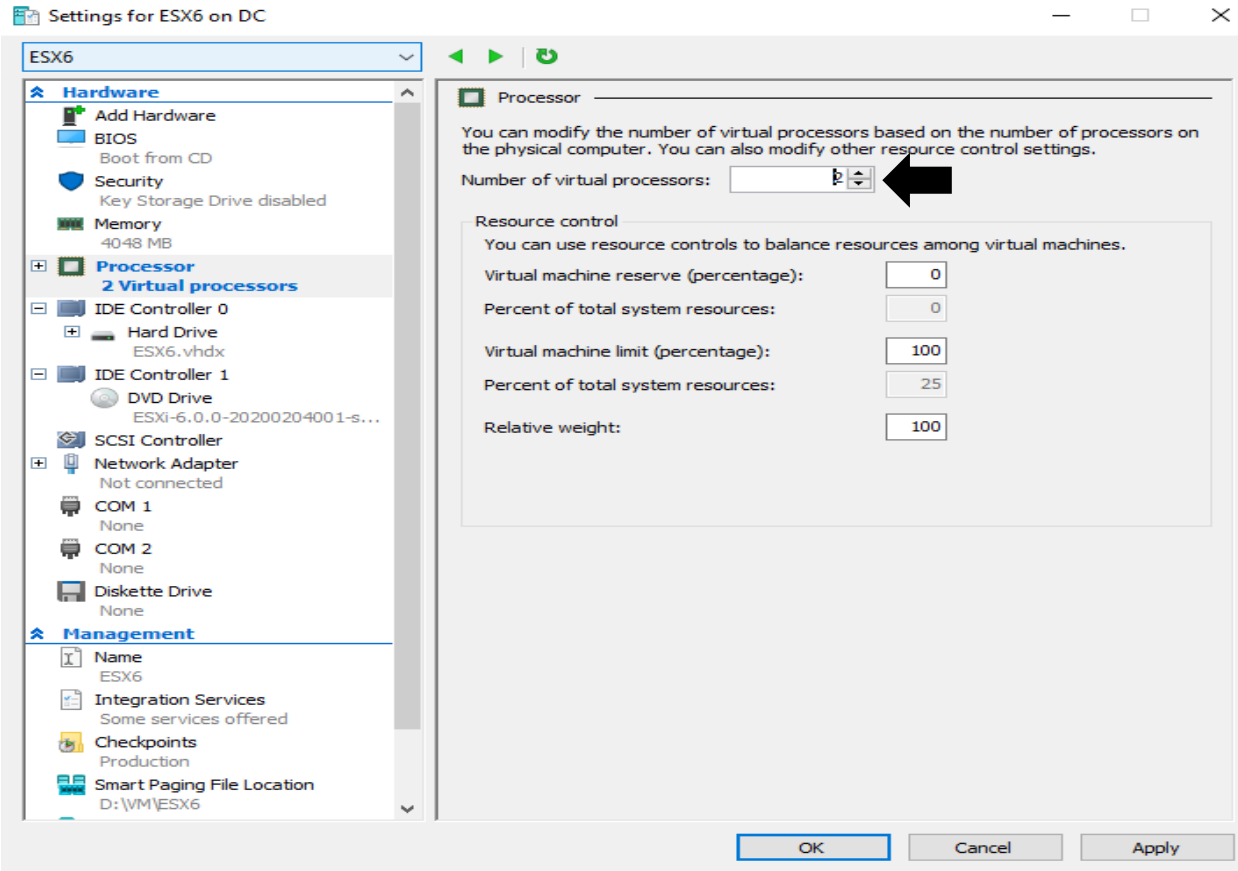

Hyper-V Manager

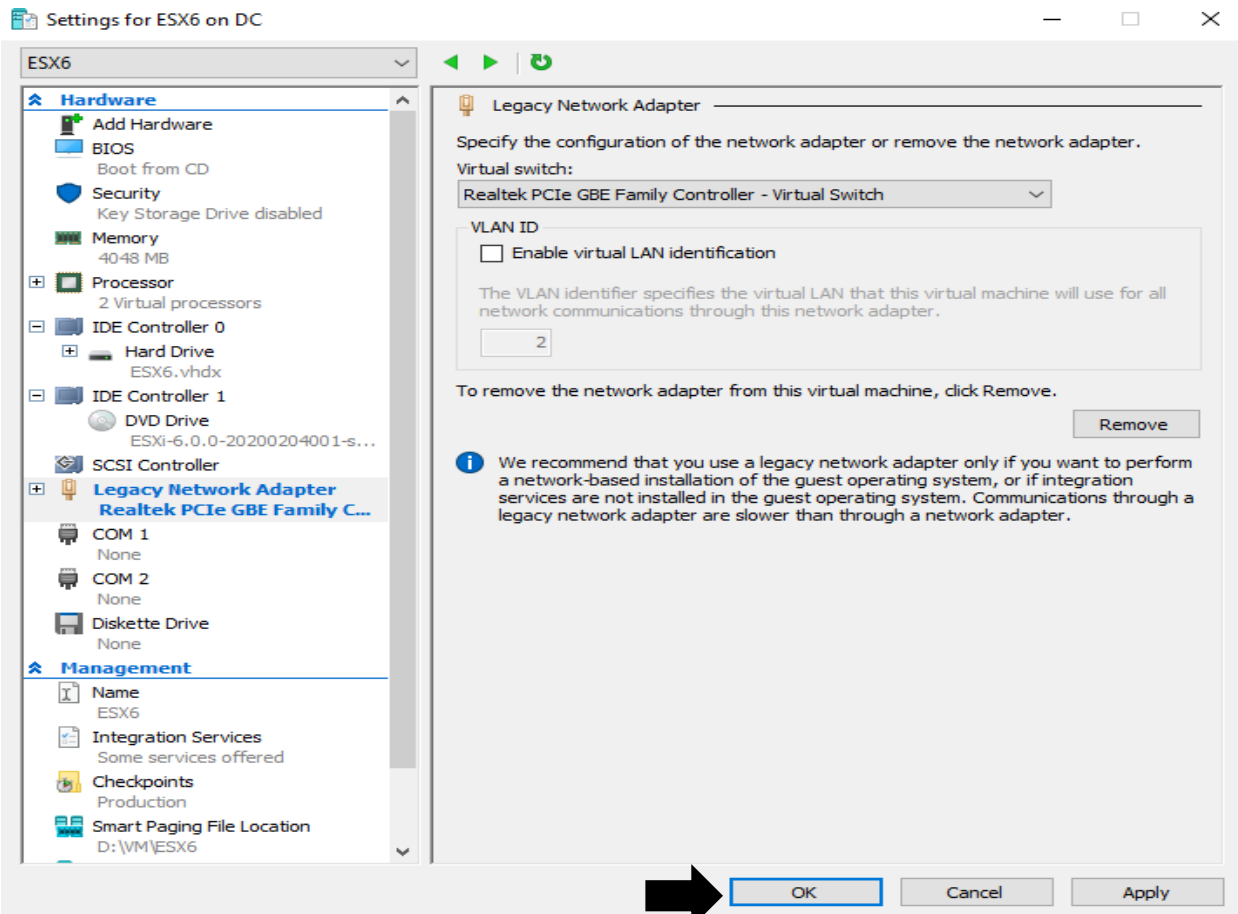

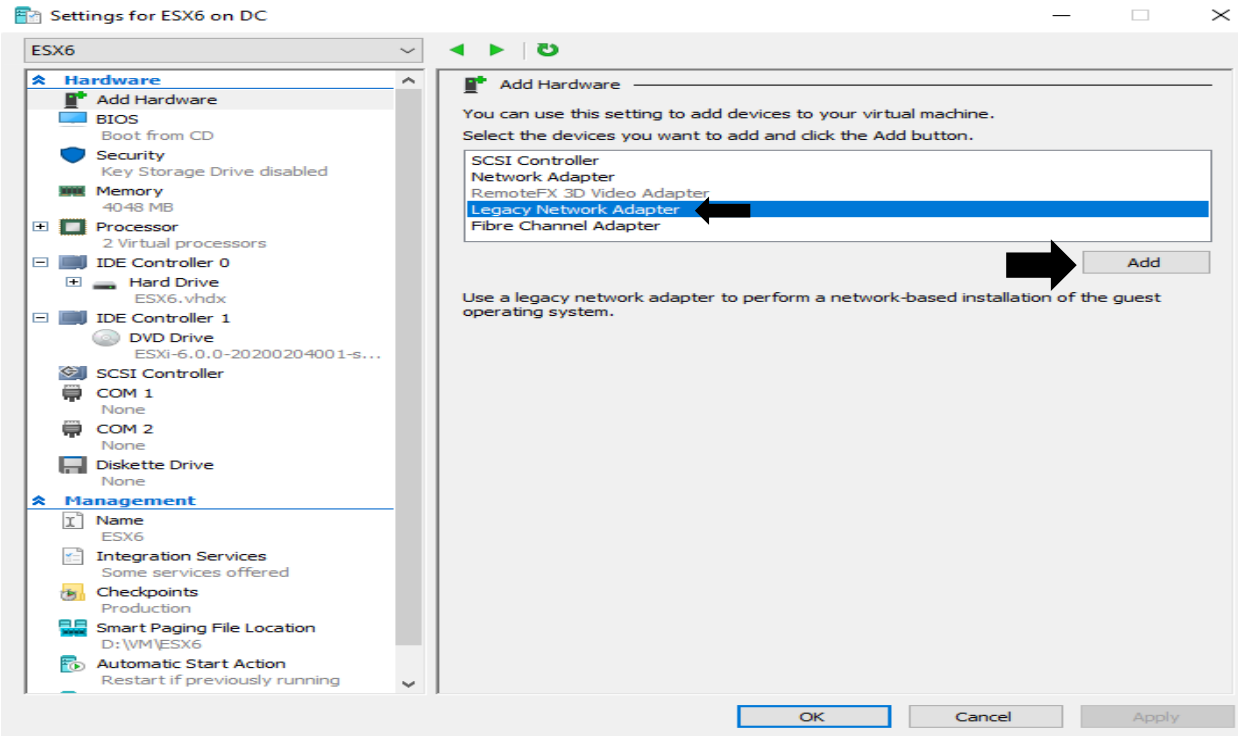

File Action View Help

Hyper-V Manager

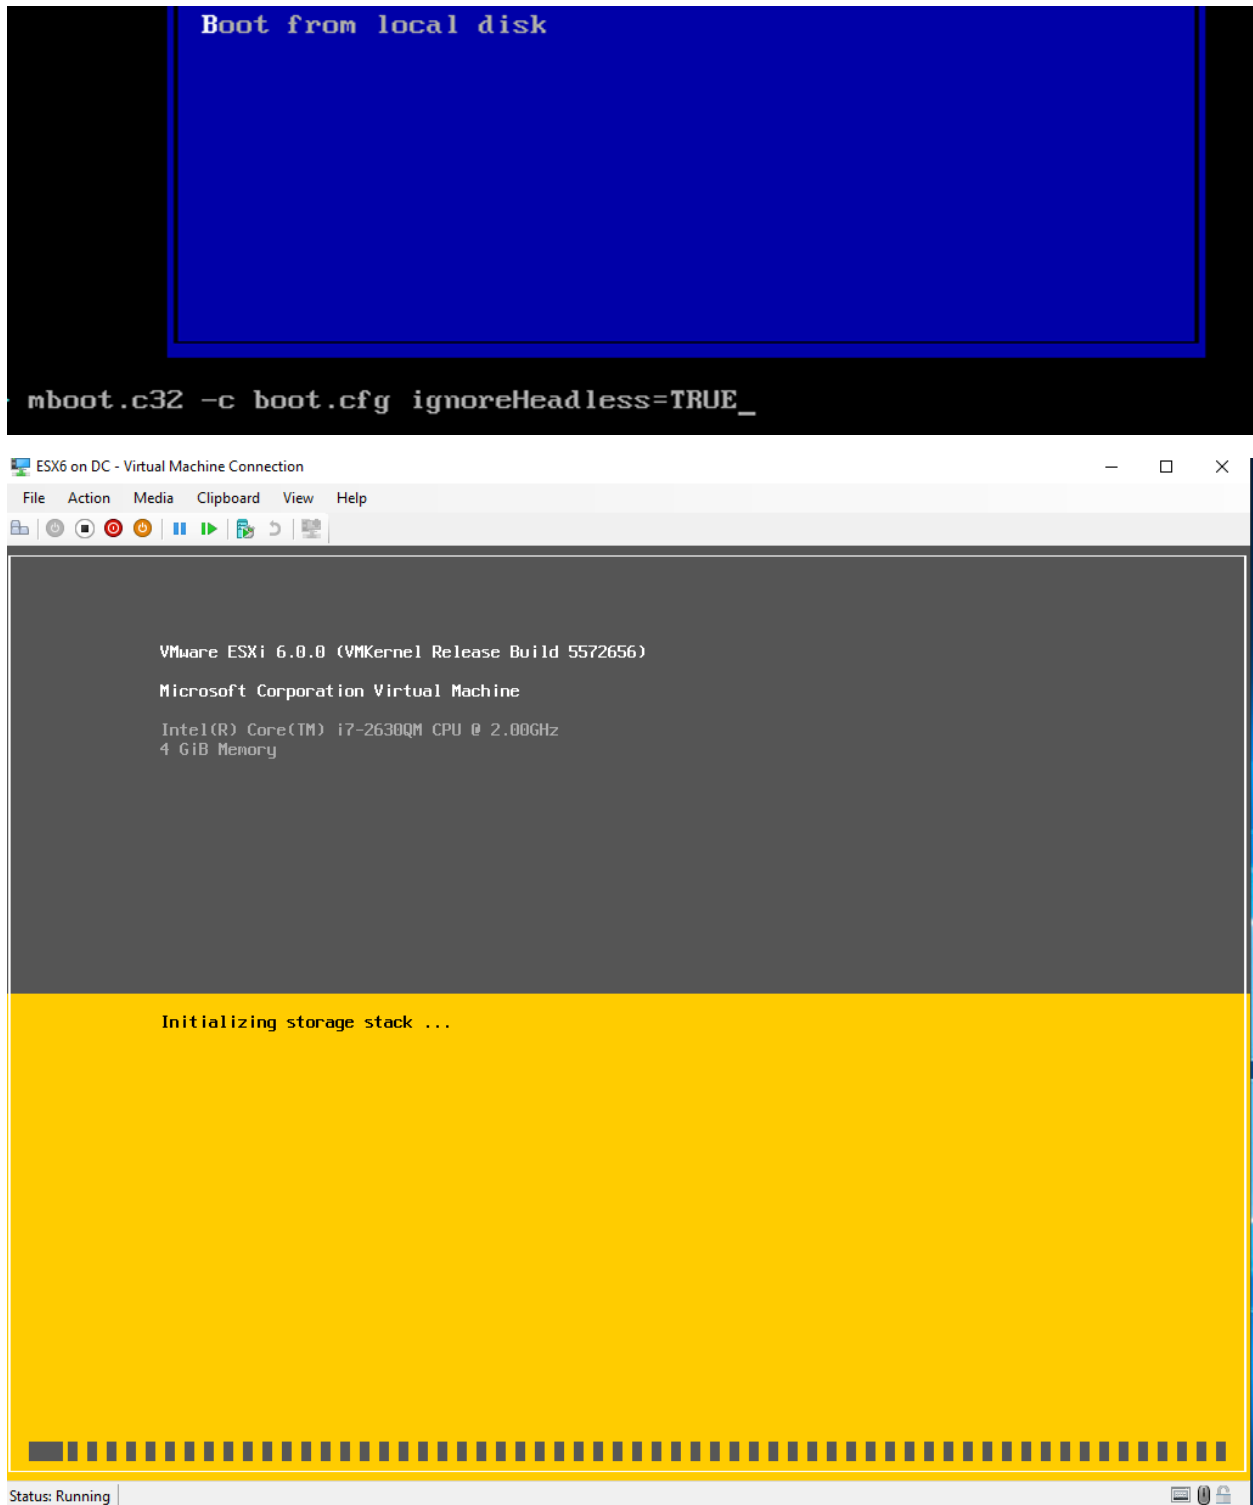

DC

Virtual Machines							
Name	State	CPU Usage	Assigned Memory	Uptime	Status	Configurati...	
DPM	Off					9.0	
ESX6	Off					9.0	

Now power on the virtual machine. When you see Blue screen Press TAB and enter this command **ignoreHeadless=TRUE** and press Enter. The ISO will start to load and you can install ESXi6.0

Welcome to the VMware ESXi 6.0.0 Installation

VMware ESXi 6.0.0 installs on most systems but only systems on VMware's Compatibility Guide are supported.

Consult the VMware Compatibility Guide at:
<http://www.vmware.com/resources/compatibility>

Select the operation to perform.

(Esc) Cancel (Enter) Continue

End User License Agreement (EULA)

VMWARE END USER LICENSE AGREEMENT

PLEASE NOTE THAT THE TERMS OF THIS END USER LICENSE AGREEMENT SHALL GOVERN YOUR USE OF THE SOFTWARE, REGARDLESS OF ANY TERMS THAT MAY APPEAR DURING THE INSTALLATION OF THE SOFTWARE.

IMPORTANT-READ CAREFULLY: BY DOWNLOADING, INSTALLING, OR USING THE SOFTWARE, YOU (THE INDIVIDUAL OR LEGAL ENTITY) AGREE TO BE BOUND BY THE TERMS OF THIS END USER LICENSE AGREEMENT ("EULA"). IF YOU DO NOT AGREE TO THE TERMS OF THIS EULA, YOU MUST NOT DOWNLOAD, INSTALL, OR USE THE SOFTWARE, AND YOU MUST DELETE OR RETURN THE UNUSED SOFTWARE TO THE VENDOR FROM WHICH YOU ACQUIRED IT WITHIN THIRTY (30) DAYS AND REQUEST A REFUND OF THE LICENSE FEE, IF ANY, THAT

Use the arrow keys to scroll the EULA text

(ESC) Do not Accept (F11) Accept and Continue

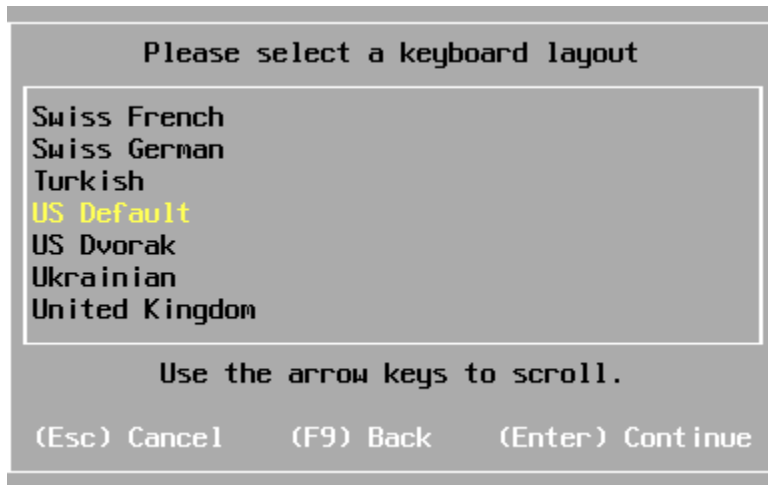

Select a Disk to Install or Upgrade

- * Contains a VMFS partition
- # Claimed by VMware Virtual SAN (VSAN)

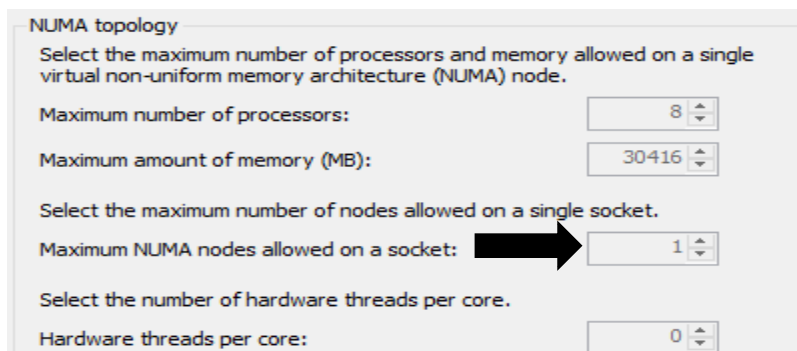

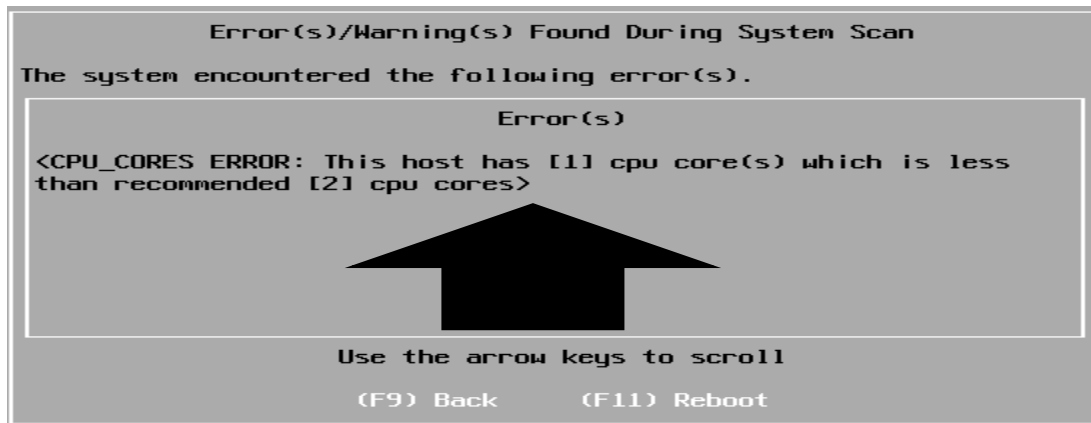

Storage Device	Capacity

Local:	
ATA Virtual HD (t10.ATA____Virtual_HD____...) 20.00 GiB	
Remote:	
(none)	

(Esc) Cancel (F1) Details (F5) Refresh (Enter) Continue

If you see this error – you can change NUMA setting to 2 within VM settings and try again.

Confirm Install

The installer is configured to **install** ESXi 6.0.0 on:
t10.ATA____Virtual_HD_____.

Warning: This disk will be repartitioned.

(Esc) Cancel (F9) Back (F11) Install

Installation Complete

ESXi 6.0.0 has been **successfully** installed.

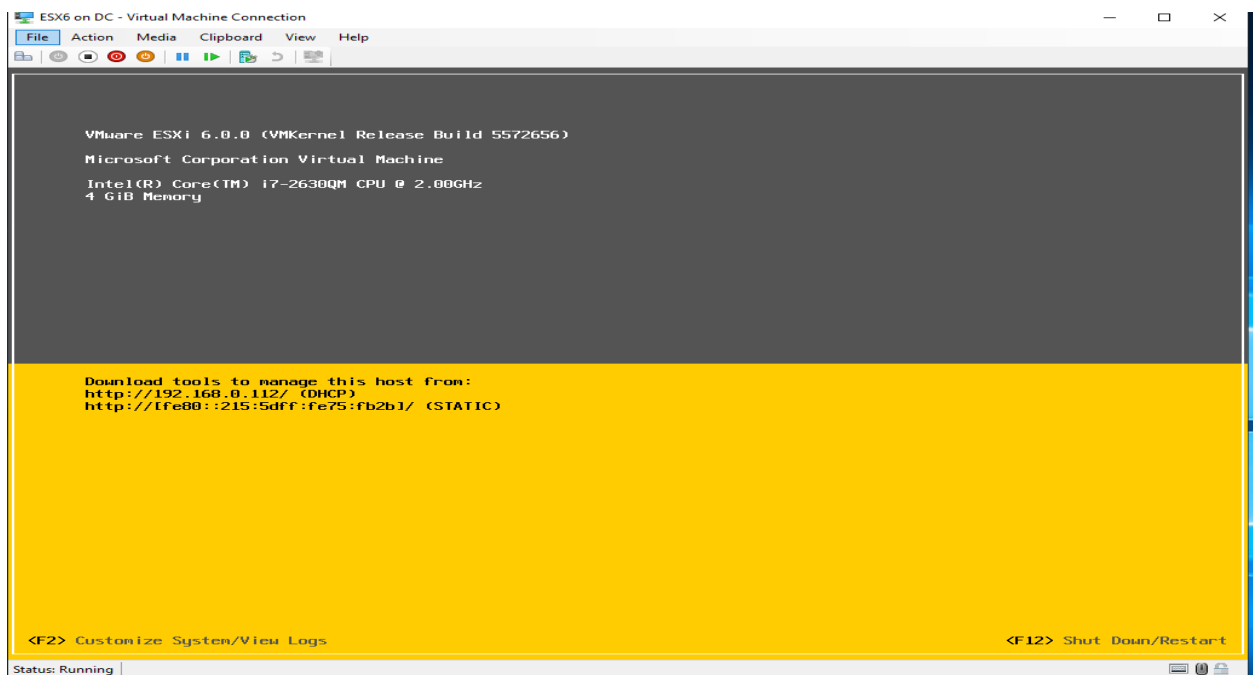

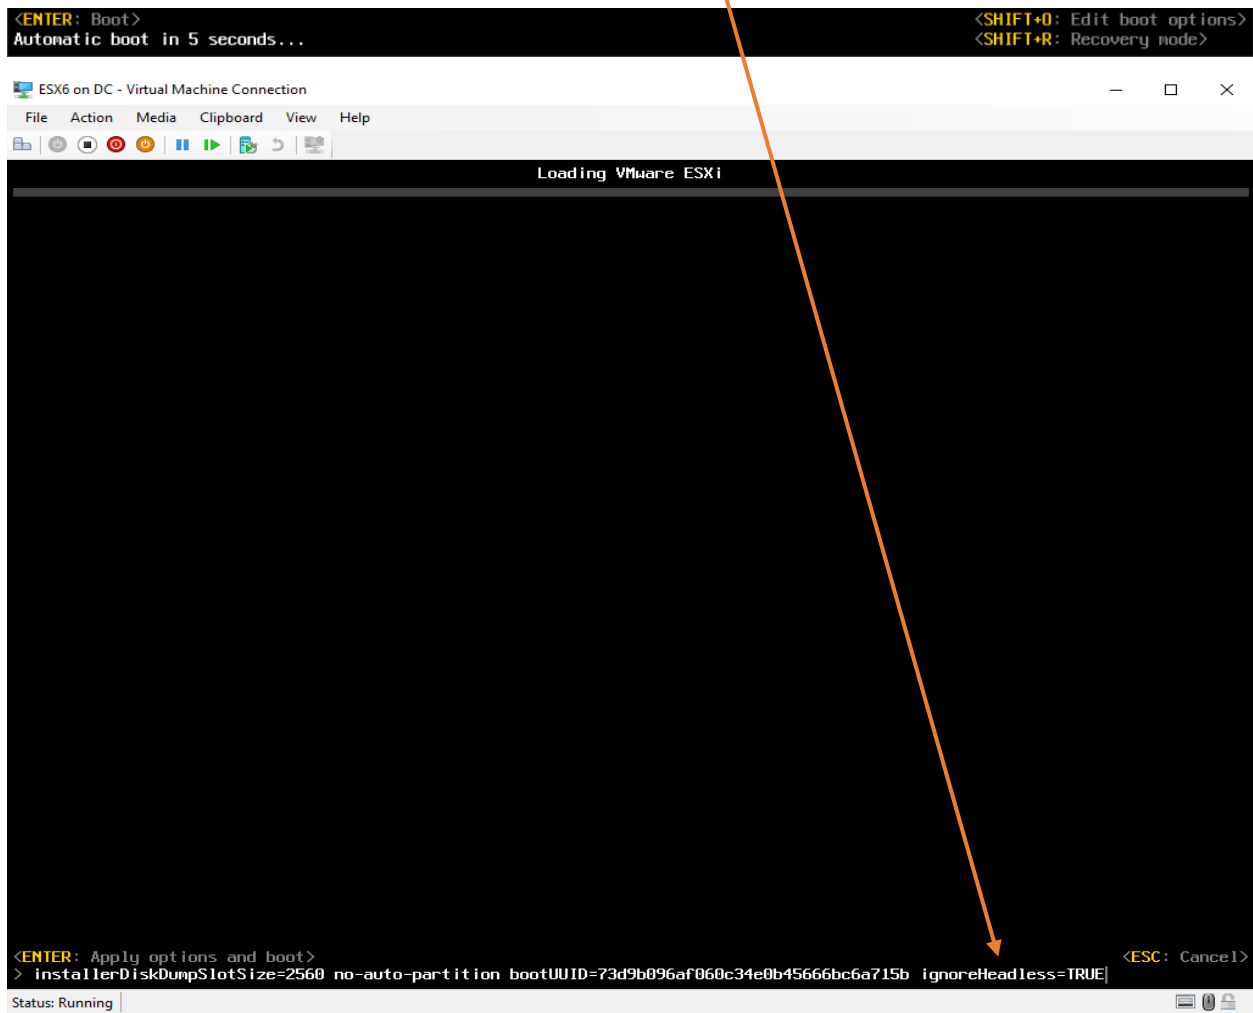

ESXi 6.0.0 will operate in evaluation mode for 60 days. To use ESXi 6.0.0 after the evaluation period, you must register for a VMware product license. To administer your server, use the vSphere Client or the Direct Control User Interface.

Remove the installation disc before rebooting.

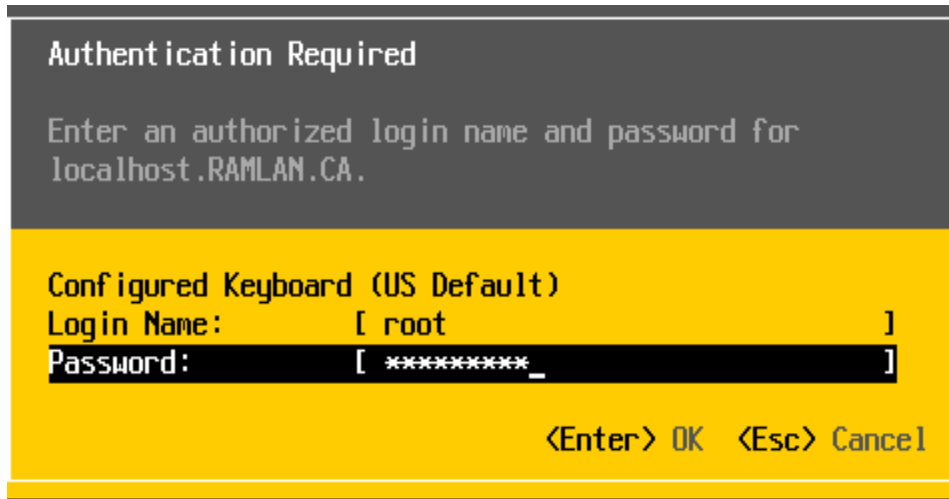

Reboot the server to start using ESXi 6.0.0.

(Enter) Reboot

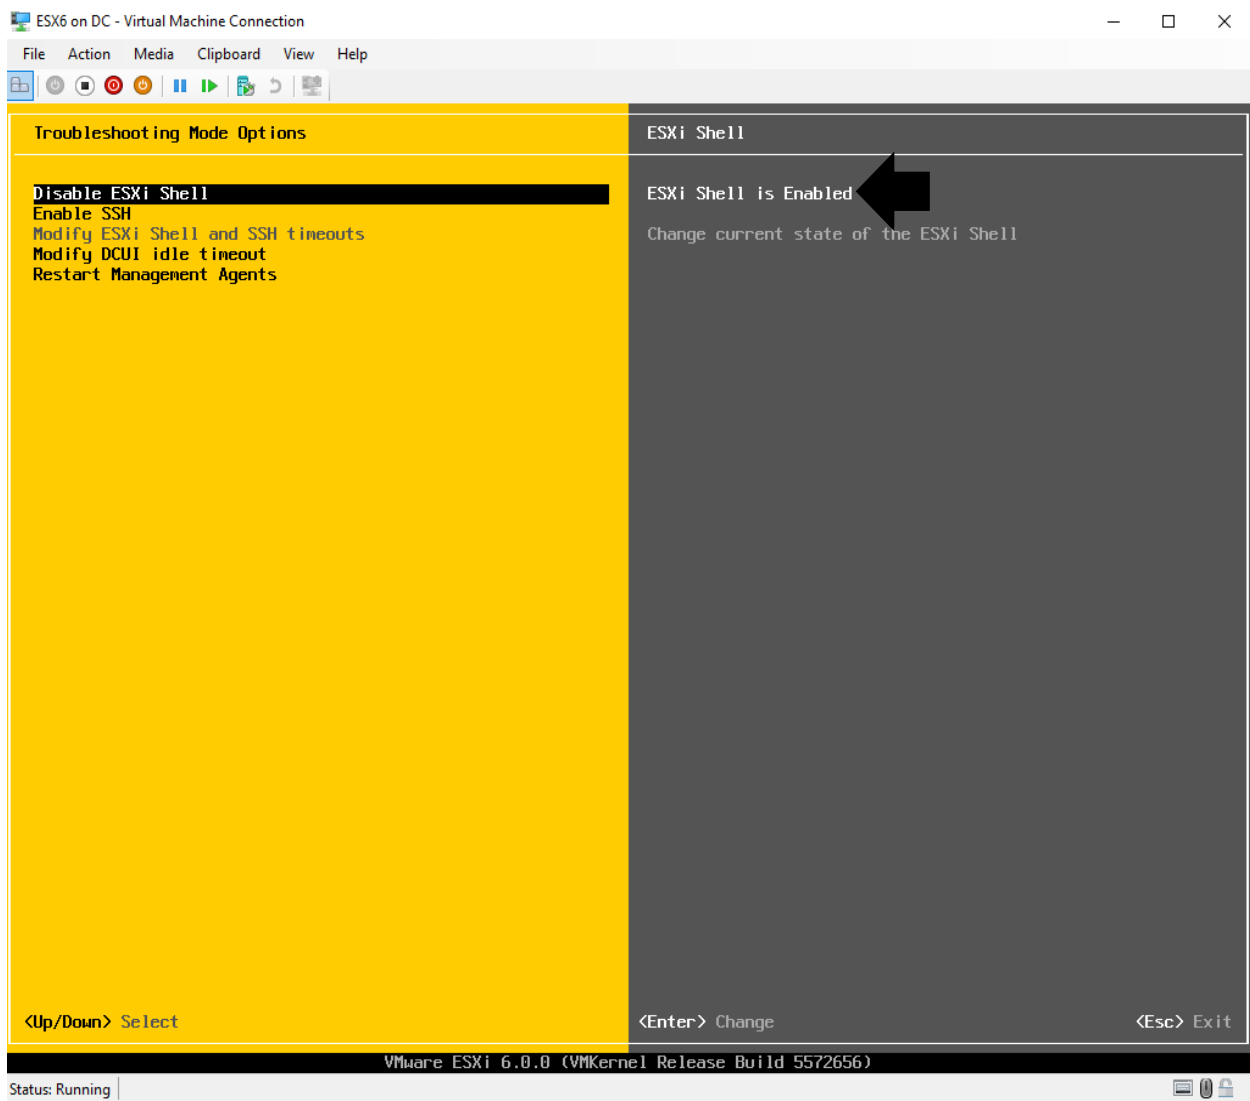

When the system starts to reboot – Press Shift+O and enter

Press F2 – Enter Root and Password

Enable Shell

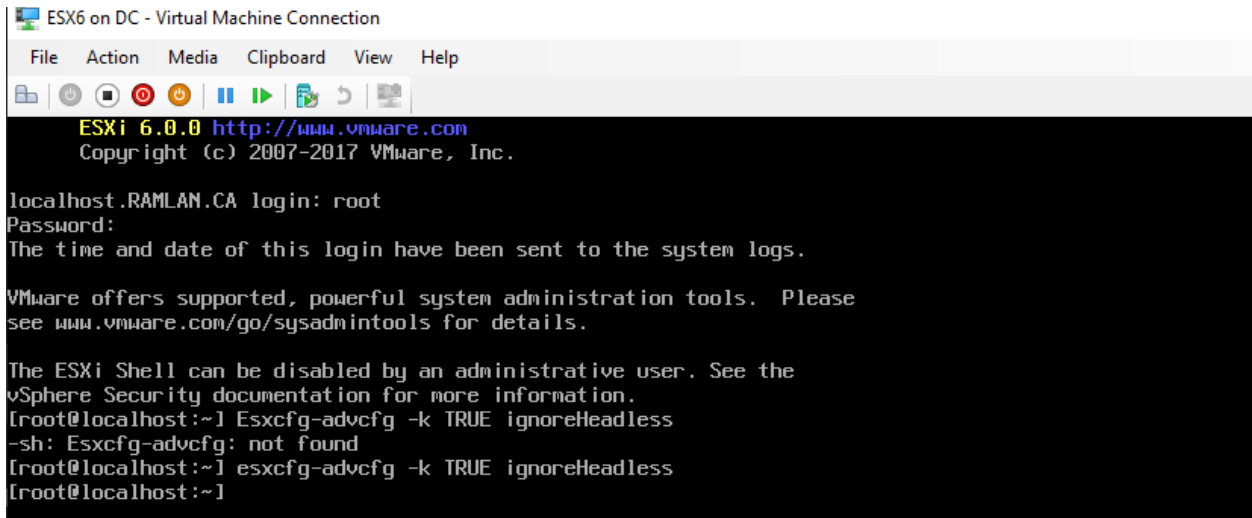

Press Alt+F1

Enter Root and Password

Type below command `esxcfg-advcfg -k TRUE ignoreHeadless`

Now Press Alt+F2

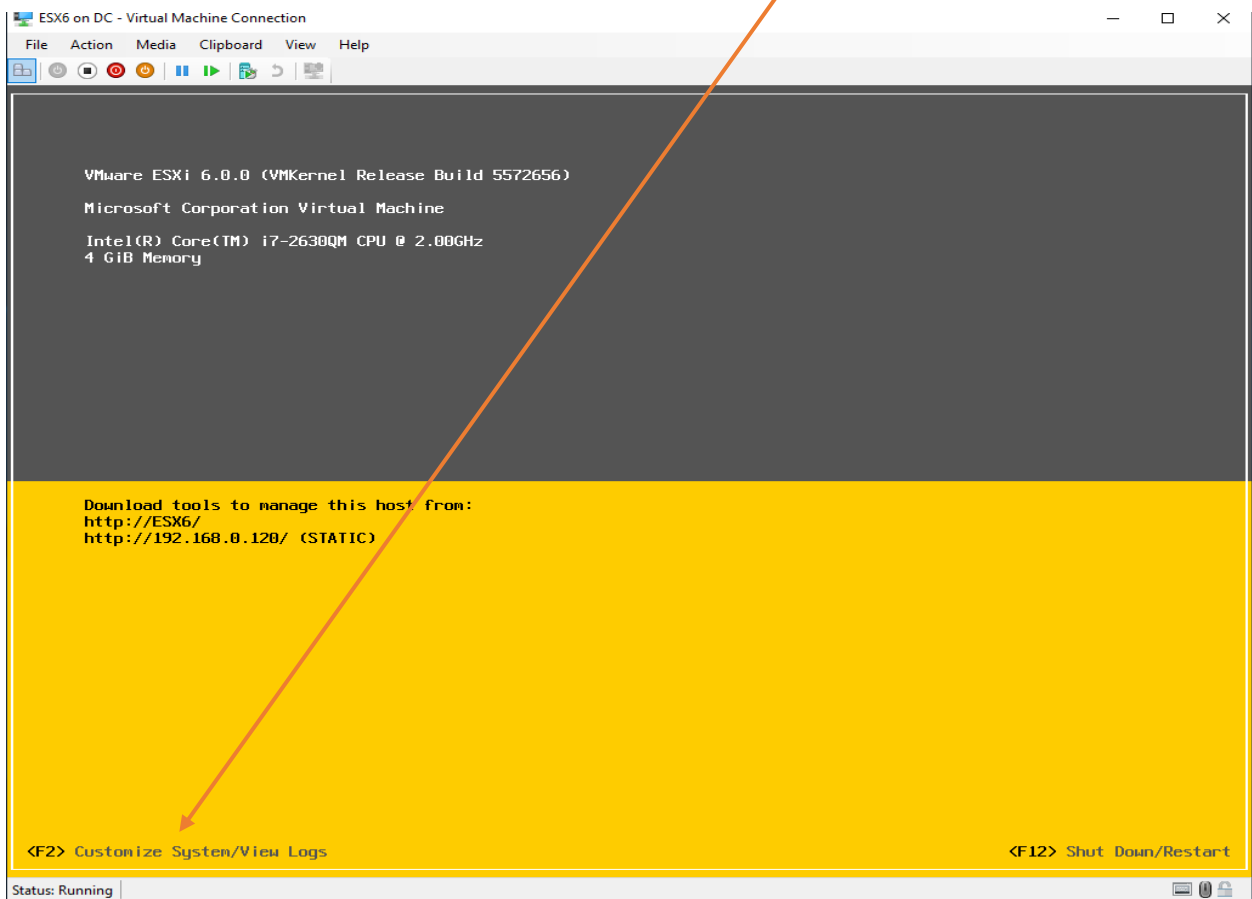

```
ESXi 6.0.0 http://www.vmware.com
Copyright (c) 2007-2017 VMware, Inc.

localhost.RAMLAN.CA login: root
Password:
The time and date of this login have been sent to the system logs.

VMware offers supported, powerful system administration tools. Please
see www.vmware.com/go/sysadmintools for details.

The ESXi Shell can be disabled by an administrative user. See the
vSphere Security documentation for more information.
[root@localhost:~] Esxcfg-advcfg -k TRUE ignoreHeadless
-sh: Esxcfg-advcfg: not found
[root@localhost:~] esxcfg-advcfg -k TRUE ignoreHeadless
[root@localhost:~]
```

Now you can configure network settings and others by pressing F2

```
VMware ESXi 6.0.0 (VMKernel Release Build 5572656)
Microsoft Corporation Virtual Machine
Intel(R) Core(TM) i7-2630QM CPU @ 2.00GHz
4 GiB Memory

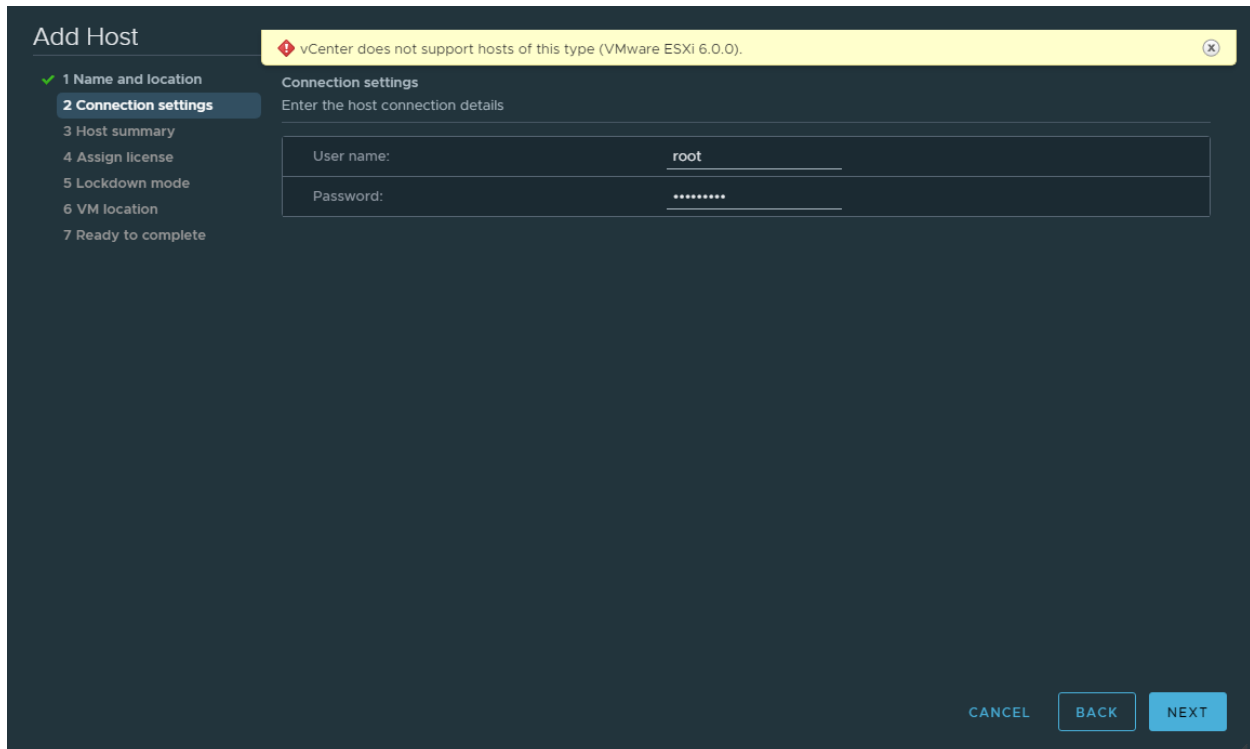

Download tools to manage this host from:
http://ESX6/
http://192.168.0.120/ (STATIC)

<F2> Customize System/View Logs
<F12> Shut Down/Restart

Status: Running
```

With this you have nested ESXi6.0 on Hyper-V running Windows Sever 2019.

As you can see below, I cannot add ESX6 nested host to vCenter Appliance 7.0. ESXi6.0 is not supported with vCenter 7.0

I am fine since, I was just testing the possibility of running ESXi on Hyper-V.

Thanks

Ram Lan
