## How to setup PatchMyPC for Current Branch (Configuration Manager)

In this post, I am going to setup PatchMyPC on CB2211 running Windows Server 2022.

### Hardware / Software requirements - They are pretty simple. Here it is...

## Hardware: #

The Publisher is a lightweight Windows application with a GUI frontend and a Windows service backend. The hardware requirements can be found below.

- CPU: 2 CPU or more
- Memory: 8GB of RAM or more
- Disk Space: 80GB of disk space or more
  - The amount of disk space required will depend on the number of selected products.

#### Software:

- Microsoft .NET Framework 4.6.2
- Internet Connection
  - List of Domains Used for Downloads
- Install the Publisher on top-most WSUS/Software Update Point in the environment
- Appropriate disk space depending on the number of products enabled
- Install the Configuration Manager console
- Supported Operating Systems
  - Windows Server 2012, Windows Server 2016, Windows Server 2019, Windows Server 2022
  - Windows Server Update Services (WSUS) installed and configured

You can download PatchMyPC MSI from here <a href="https://patchmypc.com/msi">https://patchmypc.com/msi</a>

### Enable Intune Standalone Mode?

Optionally, you enable only Microsoft Intune publishing.

For Intune only customers, you can disable th WSUS and Configuration Manager.	e components a	and prerequisite ch	ecks related to

<u>Certificate – Self Signed</u> - When working with a Configuration Manager or WSUS implementation, proper certificate configuration is crucial. One way Microsoft helps ensure an update is considered secure and from a trusted source is through the utilization of a code signing certificate. This requirement means all custom updates must be code signed before injection into WSUS. We provide three different ways to configure the certificate.

In most organizations, allowing Configuration Manager to manage the certificate is acceptable and the easiest option.

# Open SCCM Console – Administration – Sites – Right Click Site – Configure Site Components – Software Update Point

✓ Enable third-party software updates         If you enable this option, you can subscribe to third-party update catalogs, publish their updates to Windows Server Update Services (WSUS), and deploy them to clients.         Learn more about third-party software updates.         WSUS signing certificate configuration         Configuration Manager can automatically manage the third-party WSUS signing certificate, or you can choose to manually configure the certificate.         Learn more.         ● Configuration Manager manages the certificate         ○ Manually manage the certificate         Current WSUS signing certificate details         Issuer:       CN=WSUS Publishers Self-signed         Thumbprint:       [A99DACBE04215C420E1169DE77590444B58A3728]         Expiration Date:       10-Oct-2024 10:38:08 AM	öync Settings Third Party Upd	Update Files lates WSUS	Classifications Maintenance	Products Maximum Ru	Sync Schedule un Time	Supersedence Rule	es Languages

VLC Media Player (x64) - MSI Install

<u>Sync Schedule</u> - By default, we recommend the Publisher sync runs on a daily basis. The sync schedule only controls when updates or applications are published to your environment. Patch My PC does not automatically create deployments in Configuration Manager for you.

<u>Advanced – Local Content Repository</u> – Certain products require the content to be downloaded ahead of time into a known folder. This typically is related to specific vendors who's content can only be downloaded after logging in or paying for the software.

- Local Content Per	enitory (Mara lafa)	
Local Content Nep	ository (More mio)	
Some products requi	re manual download. You	will need to download the newest update to the local content repository for
these products manu	ally. The local content rep	pository can also be a fallback for download failures and hash mismatches.
-	-	-
Local Content Path:	C:\Local Repo	Browse
	Set to default	
	Secto deladit	Delete the update file in the local repository after publishing
_		

Check the local content repository for content files before attempting to download content files from the internet.

**Backup and Restore Settings** - All settings within the publisher are backed up the publisher is closed using the "OK" button, or the "Apply" button. These settings are stored in the backup directory where the Publisher is installed. You can get an immediate backup of the publisher at any time using the options in the Advanced tab.

Once you have all the configuration done it is time to perform one final sync for All Software Updates and then deploy test application to a device to see how it works out.

I have 7-Zip v22 deployed to All Systems collection. It is showing up in Software Center

This is how Applications folder will look when you have done all the configuration.

If you add more applications it will show up during next sync cycle.

With this we have completed the setup of PatchMYPC for Current Branch 2211 (Configuration Manager).

Thanks

Ram 2<sup>nd</sup> Apr 2023

Note: None of the applications will be deployed to devices. You control how to deploy and to which collections within Configuration Manager.
