

## Installing KB25073607 to fix UseUpdateClassPolicySource issue

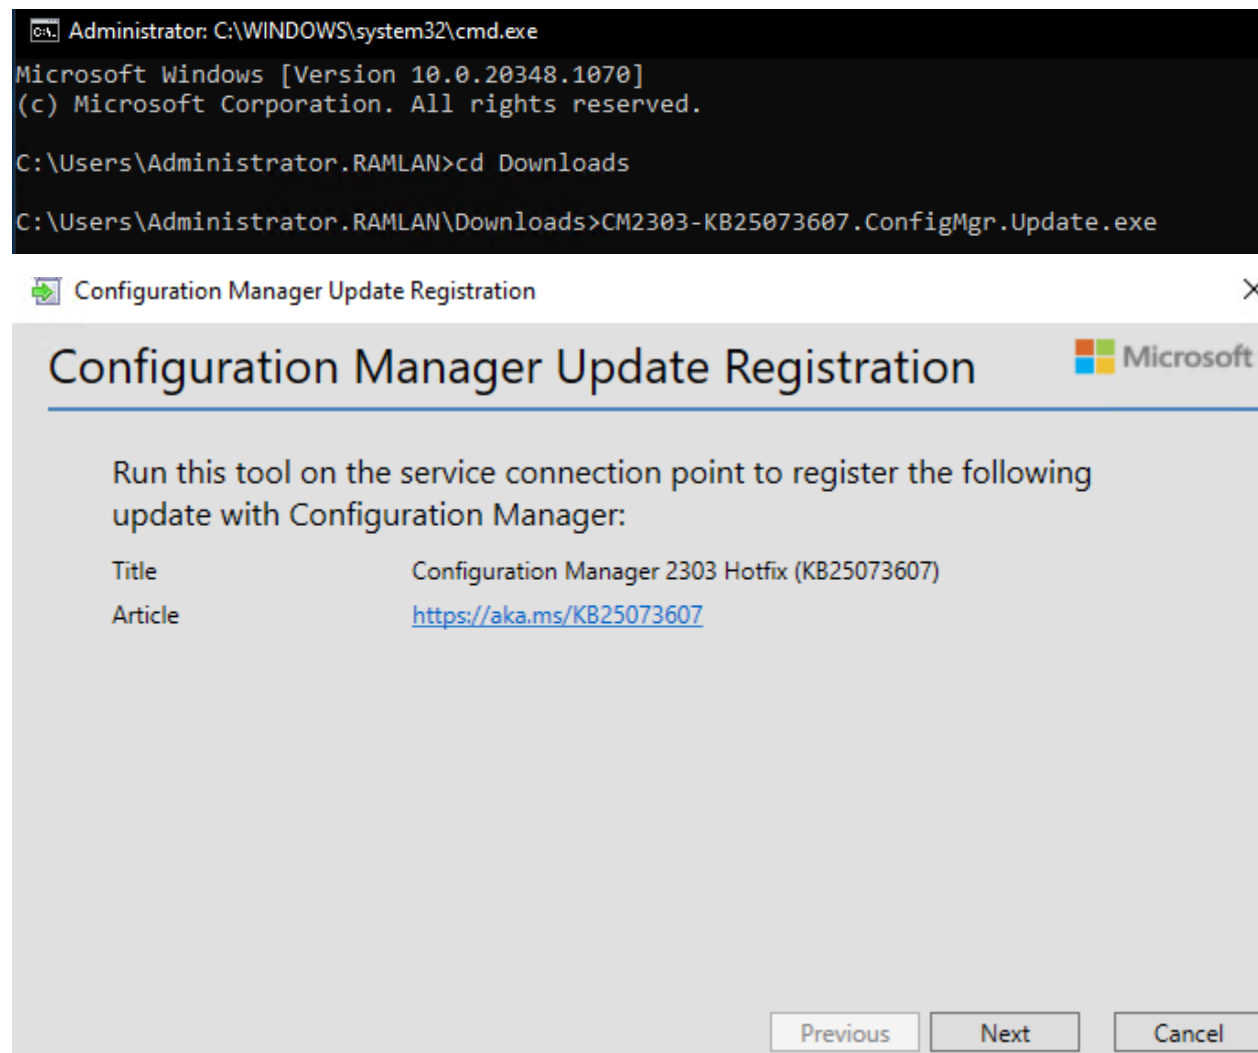

I am going to install above KB to fix the issue with update class policy. You can find more info from below link.

You can download the hot fix from here - [https://aka.ms/KB25073607\\_Payload](https://aka.ms/KB25073607_Payload)

<https://learn.microsoft.com/en-us/mem/configmgr/core/servers/manage/use-the-update-registration-tool-to-import-hotfixes>

<https://learn.microsoft.com/en-us/mem/configmgr/core/servers/manage/install-in-console-updates>

Open Cmd as Admin and run this command CM2303-KB25073607.ConfigMgr.Update.exe

Configuration Manager Update Registration

## Configuration Manager Update Registration

 This update has been registered. You can deploy this update after it becomes available in the Update node of the console.  
[For More information see the online documentation.](#)

Previous Next Exit

After sometime you will see above update in the console.

### Client update settings

This update includes an update for the Configuration Manager client. You can upgrade your clients immediately, or validate this client in a pre-production collection before you upgrade all your Configuration Manager clients.

- Upgrade without validating  
Overwrites your current Configuration Manager client package with the new client update. All new client installations and client upgrades use this new client update.
- Validate in pre-production collection  
Validate the client update on members of the pre-production collection while you keep your production client package intact. Later, you can overwrite the production package using Client Update Options in the Updates and Servicing node of the Configuration Manager console.

Pre-production collection:
